Project Number(s): 6116657
analytics

## Introduction

Your Sales Executive for this project is Sheryl Savage (678-689-0312) and your Account Project Manager is Mary Beth Trembley (770-978-3173, ext. 1376). Should you have any questions or comments regarding any aspect of the survey or reporting process, please feel free to call either your Sales Executive or your Account Project Manager.

## New in 2017

The following changes, which are also reported in the Healthcare Effectiveness Data and Information Set (HEDIS ${ }^{\circledR}{ }^{1} 2017$ Volume Three Technical Update Specifications, have been implemented for administration of the 2017 Consumer Assessment of Healthcare Providers and Systems (CAHPS ${ }^{\circledR}$ ) ${ }^{2}$ 5.0 H survey.

## Sampling Procedures

For the 2017 survey administration, plans can no longer combine sample frames for different product lines and products. Additionally, NCQA revised the systematic sampling method. Vendors will deduplicate the sample frame by household before pulling the systematic sample to reduce respondent burden.

## Product Updates

NCQA removed the commercial child product lines (Commercial Child with/without CCC). Furthermore, NCQA will no longer report calculations for the following measures: Aspirin Use, Discussing Aspirin Use and Benefits, Rating of Overall Health, and Rating of Overall Mental/Emotional Health.

Although there were no changes to the survey tool in 2017, NCQA clarified that a standard transition statement could be added to a survey before Custom/Supplemental questions - if applicable.

Throughout this report, information essential for understanding the report and suggestions for a course of action for developing quality initiatives are identified by this symbol.

[^0]Information about the Chronic Care Measurement Set

- The CAHPS 5.0H Child Survey (with CCC Measurement Set) assesses the experience of care for the general population of children and the population of children with chronic conditions. These conditions include relatively common conditions like asthma, as well as rare conditions such as juvenile diabetes and Muscular Dystrophy.
- The total sample size is 3,490 child members per plan. A total of 1,650 child members are selected from the eligible population (General Population). An additional 1,840 child members with a claim status indicating a probable chronic condition, as defined by NCQA, are selected from the remaining database (Supplemental Sample). Note: These are minimum NCQA sample size requirements. Plans may oversample or augment if they desire.
- NCQA defines the member as having a chronic condition through a survey-based screening tool. The CCC screening tool contains five sections representing five different health conditions. A child member is identified as having a chronic condition if all questions for at least one specific health consequence are answered "Yes."
- Health Plans that collect CCC data receive two separate sets of results: one for the General Population and one for the population of children with chronic conditions (CCC Population). For each population, results include the same ratings, composites, and individual question Summary Rates as those reported for the CAHPS Health Plan 5.0 H , Child Version. In addition, five CCC-specific measures are calculated for each population. Although CCC results are not eligible for public reporting, NCQA suggests that CCC results for the General and CCC Populations be compared.

2017 Final Report for Molina Healthcare of New Mexico Consumer Assessment of Healthcare Providers and Systems (CAHPS ${ }^{\circledR}$ ) Survey

## 1. Executive Summary

SPH Analytics (SPHA), a National Committee for Quality Assurance (NCQA) certified HEDIS ${ }^{\circledR}$ Survey Vendor, was selected by Molina Healthcare of New Mexico to conduct its 2017 CAHPS ${ }^{\circledR}$ 5.0H Medicaid Child Member Satisfaction Survey (with CCC Measurement Set). NCQA requires health plans to submit CAHPS ${ }^{\circledR}$ survey results in compliance with HEDIS ${ }^{\circledR}$ accreditation requirements.

The overall objective of the CAHPS ${ }^{\circledR}$ study is to capture accurate and complete information about consumer-reported experiences with health care. Specifically, the survey aims to measure how well plans are meeting their members' expectations and goals; to determine which areas of service have the greatest effect on members' overall satisfaction; and to identify areas of opportunity for improvement, which could aid plans in increasing the quality of provided care.

SPH Analytics surveyed 3,820 (1,980 General Population + 1,840 supplemental sample) eligible child members of Molina Healthcare of New Mexico using a mixed (mail and phone) survey methodology, per NCQA protocol, ${ }^{3}$ to achieve a total response rate of $26.6 \%$.

This report summarizes results derived from the CAHPS ${ }^{\circledR}$ 5.0H Medicaid Child Member Satisfaction Survey (with CCC Measurement Set) as applied to a sample of your health plan members and presents the findings by plan service area (composite) and by each individual question (attribute). In general, satisfaction is presented by Summary Rates, which represent the percent of respondents who chose the most positive question responses as specified by NCQA. ${ }^{4}$

## General Population

SPH Analytics mailed the 2017 CAHPS ${ }^{\circledR}$ 5.0H Medicaid Child Member Satisfaction Survey (with CCC Measurement Set) to a sample of 1,980 eligible child members of Molina Healthcare of New Mexico. SPH Analytics collected 513 valid surveys from this sample, yielding a general population response rate of $26.2 \%{ }^{5}$

## Children with Chronic Conditions Population

Children with chronic conditions generally represent a relatively small proportion of the overall child population. To achieve a sufficient number of complete surveys for CCC results to be calculated, a supplemental sample of children who are more likely to have a chronic condition, based on claims experience, is selected and added to the standard CAHPS ${ }^{\circledR} 5.0 \mathrm{H}$ Child Survey sample (General Population). After the General Population sample is pulled, the supplemental sample is pulled based on a prescreen sample code. The NCQA required total sample size is 3,490 (1,650 General Population $+1,840$ supplemental sample), although plans may oversample if they choose.

Once surveys are completed, the CCC Population is identified based on the member's responses to the CCC survey-based screening tool. ${ }^{6}$ The general population data set and the CCC population data set are not mutually exclusive groups. For example, if a child member is selected for the General Population sample and is identified as having a chronic condition based on responses to the CCC survey-based screening tool, then the member is included in General Population and CCC Population results.

A total of 332 child members have been identified as Children with Chronic Conditions.

[^1]
## CAHPS ${ }^{\circledR}$ 5.0H Child Survey (Medicaid, with CCC Measurement Set)

This survey collects member satisfaction information for the general population of children and for the population of children with chronic conditions. For each population, results include the following composites, ratings, and question Summary Rates:

- Getting Needed Care
- Getting Care Quickly
- How Well Doctors Communicate
- Customer Service
- Shared Decision Making
- Health Promotion and Education
- Coordination of Care
- Health Care, Provider, and Plan Ratings

## Additional Composites for Children with Chronic Conditions

In addition to the above-described composites, five Children with Chronic Condition composites are calculated for each population:

- Access to Prescription Medicines
- Access to Specialized Services
- Family-Centered Care: Personal Doctor Who Knows Child
- Family-Centered Care: Getting Needed Information
- Coordination of Care for Children with Chronic Conditions

## Overview of Summary Rate Comparisons

The tables beginning on the following page present composite, measure, and rating Summary Rate Scores (SR) for the Health Plan domain, the Health Care domain, and CCC Composites. Included in each table are your plan's current scores compared to trend data (if applicable), the 2017 SPH Analytics Book of Business benchmark, and the 2016 Quality Compass ${ }^{\circledR}$ All Plans ${ }^{7}$ benchmark.

[^2]
## Health Plan Domain

| Composites, Measures, <br> \& Ratings | General Population |  |  |  |  | CCC Population |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

[^3]
## CCC Composites

The CCC composites summarize satisfaction with basic components of care essential for the successful treatment, management, and support of children with chronic conditions. The 2017 and 2016 Summary Rate (SR) composite and rating scores for your plan's CCC Population are presented below. Additionally, your plan's 2017 General Population results are shown for comparison purposes.

| CCC Measurement Set Composites | CCC Population |  |  | General <br> Population <br> 2017 |
| :--- | :---: | :---: | :---: | :---: |
|  | 2017 <br> SR | 2016 <br> SR | 2016 QC All <br> Plans <br> Benchmark | Summary <br> Rates |
| Access to Prescription Medicines (Q56) | $88.8 \%$ | $88.5 \%$ | $90.7 \%$ | $92.5 \%$ |
| Access to Specialized Services | $78.1 \%$ | $77.0 \%$ | $77.1 \%$ | $79.0 \% 0^{*}$ |
| Family-Centered Care: Personal Doctor Who <br> Knows Your Child | $92.4 \%$ | $91.6 \%$ | $90.6 \%$ | $89.9 \%$ |
| Family-Centered Care: Getting Needed <br> Information (Q9) | $92.1 \%$ | $89.9 \%$ | $90.9 \%$ | $89.5 \%$ |
| Coordination of Care for Children with Chronic <br> Conditions | $82.5 \%$ | $79.1 \%$ | $77.1 \%$ | $81.6 \% \%^{*}$ |

[^4]2017 Final Report for Molina Healthcare of New Mexico
Consumer Assessment of Healthcare Providers and Systems (CAHPS ${ }^{\circledR}$ ) Survey

## Key Driver and Opportunity Analyses

Members set standards for performance whether consciously or subconsciously. Standards are usually set higher for those plan services that are deemed important to each member. These important services are the Key Drivers of Satisfaction.

Multiple linear regression analyses were run on the 2017 SPH Analytics Medicaid Child Book of Business to discover which composites were Key Drivers of Rating of Health Plan (Q54), Rating of Health Care (Q14), and Rating of Personal Doctor (Q41).

The Summary Rates of these Key Drivers are compared to the Summary Rates of all other plans in the 2017 SPH Analytics Medicaid Child Book of Business benchmark in the tables that begin on the following page. Depending on how these composite scores rank they are placed into one of the three following action categories:

Plan Strength (Market \& Maintain):
A Key Driver of Satisfaction and Summary Rates are at or above the 75th percentile when compared to the 2017 SPH Analytics Medicaid Child Book of Business benchmark.

Plan Opportunity (Investigate \& Improve):
A Key Driver of Satisfaction, but Summary Rates are below the 50th percentile when compared to the 2017 SPH Analytics Medicaid Child Book of Business benchmark.

Area to Monitor:
A Key Driver of Satisfaction, but Summary Rates are between the 50th and 75th percentiles when compared to the 2017 SPH Analytics Medicaid Child Book of Business benchmark. These Key Drivers could become strengths or opportunities depending on the plan's success in these areas.

## Rating of Health Plan Opportunity Analysis

Respondents were asked to provide an overall rating of health plan satisfaction (Q54), with "0" representing the worst and "10" representing the best. The NCQA defined Summary Rate for this measure is the percentage of respondents who rated their health plan an " 8 ," " 9 ," or "10." Members' ratings of their health plan is an important gauge of plan quality and is also the most heavily weighted CAHPS ${ }^{\circledR}$ measure in the accreditation process.

The following composites have been identified as Key Drivers of health plan rating based on the regression analysis:

| Key Drivers of <br> Health Plan Rating | Beta Coefficient <br> $(\beta)^{8}$ | Percentile Ranking | Opportunity Analysis |
| :---: | :---: | :---: | :---: |
| Customer Service | 0.627 | 64 th | Monitor |
| Getting Needed Care | 0.614 | $58 t h$ | Monitor |

[^5]
## Rating of Health Care Opportunity Analysis

Rating of Health Care (Q14) gives members an opportunity to rate all of the health care they have received in the last six months. This rating provides feedback to health plans to help improve their members' quality of care.

The following composites have been identified as the Key Drivers of health care satisfaction based on regression analysis:

| Key Drivers of <br> Health Care Rating | Beta <br> Coefficient ( $\beta$ ) | Percentile Ranking |
| :---: | :---: | :---: | :---: | Opportunity Analysis

Additionally, Rating of Health Care is highly correlated with the Rating of Personal Doctor.

## Rating of Personal Doctor Opportunity Analysis

Question 41 gives members an opportunity to rate their personal doctor. A high rating indicates members rate their personal doctors positively. A positive relationship between personal doctor and patient is an important part of health care.

The following composites have been identified as the Key Drivers of health care satisfaction based on regression analysis:

| Key Drivers of <br> Personal Doctor Rating | Beta <br> Coefficient ( $\beta$ ) | Percentile Ranking |
| :---: | :---: | :---: | :---: | Opportunity Analysis

Additionally, Rating of Personal Doctor is highly correlated with the Rating of Health Care.

## Accreditation for 2017 Scoring

NCQA allows Medicaid product lines to be scored on the CAHPS ${ }^{\circledR}$ Health Plan Survey 5.0H adult version, on the child version, or on the child with chronic conditions version questions/composites. NCQA only requires organizations to submit one set (adult or child) of survey results. In the event that a health plan elects to use the CAHPS Health Plan Survey 5.0 H , child with chronic conditions version results for accreditation, scores are based upon results derived from the General Population.
NCQA requires health plans seeking accreditation to submit specified HEDIS ${ }^{\circledR}$ measures and HEDIS ${ }^{\circledR} /$ CAHPS $^{\circledR} 5.0 \mathrm{H}$ survey results. NCQA determines the CAHPS ${ }^{\circledR} 5.0 \mathrm{H}$ portion of the score by comparing the plan's results to a national benchmark (the 90th percentile) and to national thresholds (the 75th, 50th, and 25th percentiles). The HEDIS ${ }^{\circledR}$ measure portion of the score is ascertained by comparing the plan's results to a national benchmark (the 90th percentile) and to regional and national thresholds (the 75th, 50th, and 25th percentiles). NCQA does not take into account regional thresholds for CAHPS ${ }^{\circledR}$ measures due to the fact that variations in the data are not significant by region. The Rating of Health Plan survey item receives double the points of other CAHPS ${ }^{\circledR}$ measures.

To receive points toward accreditation scoring, measures submitted by the organization must receive a Reportable ( $R$ ) rate from an NCQA-Certified HEDIS ${ }^{\circledR}$ Compliance auditor. If the audited rate for a measure has a denominator that is too small to report a valid rate (NA) or if the organization did not offer the health benefit required by the measure ( $N B$ ), then the points for that measure are redistributed among the remaining required measures.

NCQA provides an accreditation status for each health plan entity reviewed. ${ }^{9}$ Accreditation status is valid for a maximum of 36 months from the date of the final results for the First and Renewal Evaluation options and is subject to revision resulting from annual reevaluation of HEDIS ${ }^{\circledR} /$ CAHPS $^{\circledR}$ results (if applicable). Conversely, an interim evaluation status is valid for a maximum of eighteen months.

The table below shows the results for your plan. The second column represents the approximate percentile threshold your plan achieved when compared to the benchmark. The third, fourth, and fifth columns show the point distribution. ${ }^{10}$

| Composite/Rating Item | Approximate Plan Percentile Threshold | Points Awarded per Accreditation Year |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | 2017 | 2016 | 2015 |
| Getting Needed Care | 25th | 0.650 | 0.650 | 0.743 |
| Getting Care Quickly | 50th | 1.105 | 1.105 | 1.263 |
| Customer Service | 50th | 1.105 | 1.105 | 1.263 |
| Coordination of Care (Q40) | <25th | 0.325 | 0.325 |  |
| Rating of Health Care (Q14) | 90th | 1.625 | 1.625 | 1.857 |
| Rating of Personal Doctor (Q41) | 75th | 1.430 | 1.430 | 1.634 |
| Rating of Specialist (Q48) | NA | - | - | - |
| Rating of Health Plan (Q54) | 90th | 3.250 | 3.250 | 3.714 |
| Approximate Points Earned (Out of 13.000 in 2015, 2016, and 2017) |  | 9.490 | 9.490 | 10.474 |

Note: If a plan receives an NA (indicating the denominator was less than 100) the points for that measure are redistributed among the remaining required measures. An organization that has more than four CAHPS ${ }^{\circledR}$ NAs, or which exceed ten NA or NB results between HEDIS and CAHPS ${ }^{\circledR}$ for each product line, are scored based on the standards score only and the accreditation status is capped at Commendable.

[^6]2017 Final Report for Molina Healthcare of New Mexico Consumer Assessment of Healthcare Providers and Systems (CAHPS ${ }^{\circledR}$ ) Survey

NCQA assigns points based upon a plan's ability to meet or exceed thresholds and is calculated to the thousandth. The thresholds shown on Page 4D (and made available to the public) are shown only to the hundredths and do not represent the final threshold used to determine the distribution of points for accreditation. Therefore, plan percentile thresholds, as well as points earned, are approximations only.

## 2. Methodology

The CAHPS ${ }^{\circledR} 5.0 \mathrm{H}$ protocol allows plans to select one of two options for survey administration: 1) a five-wave mail-only methodology (three questionnaire mailings and two reminder postcards) or 2) a mixed methodology (mail and telephone), which includes four waves of mail (two questionnaire mailings and two reminder postcards) with a telephone follow-up of at least three attempts. NCQA also allows pre-approved enhanced methodologies, which can include an Internet component of the survey. Molina Healthcare of New Mexico chose a mixed (mail and phone) survey methodology.

## Response Rate

The required sample size is 3,490 ( 1,650 General Population $+1,840$ supplemental sample), in accordance with NCQA protocol for the Medicaid Child Member Satisfaction Survey (with CCC Measurement Set), although plans may choose to over-sample or augment ${ }^{11}$ their population if desired. Your plan's sample size is $3,820(1,980$ General Population + 1,840 supplemental sample).

A response rate is only calculated for those members who were eligible and able to respond. According to NCQA protocol, ineligible members include those who are deceased, do not meet the eligible population criteria, or have a language barrier. Non-respondents include those members who have refused to participate in the survey or were added to the Do Not Call list, break-off/incomplete surveys, or members that reached a maximum attempt threshold and were unable to be contacted during the survey time period.

SPH Analytics used a mixed (mail and phone) survey administration methodology, per NCQA protocol, to achieve a total response rate of $26.6 \%$.

## General Population

SPH Analytics surveyed a sample of 1,980 eligible child members of Molina Healthcare of New Mexico. A total of 513 valid surveys ( 218 Mail and 295 Telephone) were collected from this sample. After adjusting for ineligible members, your survey response rate is $26.2 \%$. The overall NCQA target number of valid surveys is 411 .

Your plan's survey was also conducted in Spanish for non-English-speaking members during the telephone portion of the survey administration process. The total number of completes from the Spanish language component is 191.

The table on the following page shows the total number of members in the sample that fell into each of the various disposition categories. A disposition category is the final status assignment given to a member record within the sample. The category signifies both the survey administration protocol used to complete the survey (completes are 10=Mail, $20=$ Phone, and 30=Internet, if applicable) and the status of the record (for example, 01= did not meet eligibility criteria; 03= language barrier). Depending upon the survey protocol, some of the groupings on the following page may not apply.

[^7]| Disposition Group | Disposition Category | $\mathbf{N}$ |
| :--- | :---: | :---: |
| Ineligible | Deceased (05) | 0 |
|  | Does not meet eligibility criteria (01) | 23 |
|  | Language barrier (03) | 1 |
|  | Mentally/Physically incapable (04) | 0 |
|  | Total Ineligible | $\mathbf{2 4}$ |
| Non-response | Break-off/Incomplete (02) | 52 |
|  | Refusal (06) | 8 |
|  | Maximum attempts made (07) | 1378 |
|  | Added to DNC list (08) | 5 |

Ineligible members are subtracted from the sample size when computing a response rate as shown below.

Completed surveys
Sample size - Ineligible members $=$ Response Rate

Using the final figures from your Medicaid Child with CCC Measurement Set Survey, the numerator and denominator used to compute your response rate are presented below.
$\frac{218 \text { (Mail) }+295 \text { (Phone) }}{1,980(\text { Sample })-24 \text { (Ineligible) }}=\frac{513}{1,956}=26.2 \%$

Refer to the Technical Notes for the protocol used to calculate the response rate and administer the survey.

## CCC Population

Children with chronic conditions represent a relatively small proportion of the overall child population. To achieve a sufficient number of complete surveys for CCC results to be calculated, a supplemental sample of children who are more likely to have a chronic condition, based on claims experience, is selected and added to the standard CAHPS ${ }^{\circledR} 5.0 \mathrm{H}$ Child Survey sample (General Population). After the General Population sample is pulled, the supplemental sample is pulled based on a prescreen sample code. The NCQA required total sample size is 3,490 ( 1,650 General Population $+1,840$ supplemental sample), although plans may choose to over-sample their population if necessary.

Once surveys are completed, the CCC Population is identified based on the member's responses to the CCC survey-based screening tool. The general population data set and the CCC population data set are not mutually exclusive groups. For example, if a child member is selected for the General Population sample and is identified as having a chronic condition based on responses to the CCC survey-based screening tool, then the member is included in General Population and CCC Population results.

There are 332 child members who have been identified as Children with Chronic Conditions (CCC).

2017 Final Report for Molina Healthcare of New Mexico Consumer Assessment of Healthcare Providers and Systems (CAHPS ${ }^{\circledR}$ ) Survey

There are 83 CCC members who have completed the survey in Spanish.
It cannot be determined which respondents out of the total sample qualify as having a chronic condition. Given that a denominator for this equation cannot be determined, there is no response rate provided for the CCC Population.

## Profile of Survey Respondents

The demographic characteristics of respondents surveyed should be representative of your member population. SPH Analytics follows NCQA protocol to help achieve a representative sample of your plan's member population.

Pages 2A-2B show the percentages of respondents by demographic category (Child's Health Status, Child's Mental/Emotional Health Status, Child's Age, Child's Ethnicity, Child's Race, Respondent's Age, Respondent's Gender, Respondent's Education, and Relation to Child) from your current survey (displayed in blue), compared to trend data (displayed in light blue, if applicable) and the 2017 SPH Analytics Medicaid Child Book of Business benchmark (displayed in green, if applicable). The demographic makeup of your plan's member base may not mirror the "average" plan; therefore, caution is recommended when making comparisons to benchmark data. To help you identify how your plan's population compares to other plans and to previous data, statistically significant differences are highlighted. Refer to the Technical Notes for more information on this topic.

Page 2D provides a comparison of your CCC Population demographics with the General Population demographics. Significance testing is not appropriate for this comparison since there is "overlap" between the two groups.

Through years of experience and analysis of our books of business, SPH Analytics has observed that the demographics of a response group may have an effect on overall satisfaction results. For example, higher satisfaction ratings are usually given by members who are older and report better health status. In contrast, members who are more educated tend to give lower ratings of overall satisfaction. A comprehensive detail of demographic results for your plan is presented in Segmentation Analyses - Section 5.

Page 2C shows a segmentation of the Rating of Health Plan (Q54) results by demographic categories. Across the top of the table are scores " $0-3$," " $4-7$, ," " $8-10$," and " $9-10$." Down the far left column are the different demographic categories. The numbers in the table represent the percentage of respondents from each demographic category that rated the health plan either "0 to 3," "4 to 7 ," " 8 to 10 ," or " 9 to 10 ."

For example, in the table below, the percentages represent the respondents with a high school education or less. The interpretation would be "Of the respondents with a high school education or less, $10 \%$ rated their plan ' 0 to 3;' $30 \%$ rated their plan ' 4 to 7 ;' $60 \%$ rated their plan '8 to 10 ,' and $40 \%$ rated their plan ' 9 to 10 .'"

| Segment | Rated Plan <br> "0-3" | Rated Plan <br> "4-7" | Rated Plan <br> " $8-10$ " | Rated Plan <br> " $9-10$ " |
| :--- | :---: | :---: | :---: | :---: |
| High School Graduate or <br> less | $10 \%$ | $30 \%$ | $60 \%$ | $40 \%$ |

* Health Status and Mental/Emotional Health Status are defined by the member.

Note 1: The 2017 SPH Analytics Book of Business consists of 69 Medicaid child (Non-CCC and CCC) samples that conducted surveys with SPH Analytics in 2017 and submitted data to NCQA.

Note 2: Significance Testing - " $\downarrow$ " denotes a significantly lower percentage when compared to the current year and/or benchmark data. " $\uparrow$ " denotes a significantly higher percentage when compared to the current year and/or benchmark data. No arrow denotes that there was no significant difference between the percentages or that there was insufficient sample size to conduct the statistical test. All significance testing is performed at the $95 \%$ significance level.

## 3. Trend and Benchmark Comparisons

The CAHPS ${ }^{\circledR} 5.0 \mathrm{H}$ survey is designed to use composite scores to facilitate the aggregation of information and the communication of results. Questions are combined into composite categories comprising a particular service area managed by your plan. These composites, the questions that make up composites (attributes), additional measures, and rating questions are shown on the following pages.

## Page 3A Summary of Trend and Benchmark Comparisons

Shows how your plan's composite and key question Summary Rates compare to scores from the previous year's results (if applicable) and scores from the 2017 SPH Analytics Medicaid Child Book of Business and 2016 Quality Compass ${ }^{\circledR}$ All Plans benchmarks. To help you identify how your plan's population compares to other plans and to previous data, statistically significant differences are highlighted. Refer to the Technical Notes for more information on this topic.

Page 3B $\quad 2016$ Quality Compass ${ }^{\circledR}$ All Plans Mean and Percentiles
Shows how your health plan's composite and key question Summary Rates compare to the 2016 Quality Compass ${ }^{\circledR}$ All Plans benchmark. The General Population benchmark includes approximately 179 samples of Medicaid child plans (Non-CCC and CCC) that submitted to NCQA. Conversely, the CCC Population benchmark includes approximately 53 samples of Medicaid child plans (CCC) that submitted to NCQA. Your plan's approximate percentile ranking ${ }^{12}$ in relation to the Quality Compass ${ }^{\circledR}$ All Plans benchmark is displayed next to each score.

Page 3C 2017 SPH Analytics Medicaid Child Book of Business Mean and Percentiles Shows how your health plan's composite and key question Summary Rates compare to the mean and percentile (25th, 50th, 75th, and 90th) scores generated from the 2017 SPH Analytics Medicaid Child Book of Business benchmark. The General Population benchmark contains data from 69 planspecific Medicaid child (Non-CCC and CCC) samples contracted with SPH Analytics to administer the CAHPS ${ }^{\circledR} 5.0 \mathrm{H}$ survey and to submit data to NCQA in 2017. Conversely, the CCC benchmark contains data from 13 planspecific Medicaid child (CCC) samples that contracted with SPH Analytics to administer the CAHPS ${ }^{\circledR}$ 5.0H survey and to submit data to NCQA in 2017. Your plan's percentile ranking is shown beside each score.

Page 3D Population Comparison (CCC Population) Shows how your health plan's composite and key question Summary Rates from your General Population compare to your CCC Population.

Note: Significance testing is not appropriate for these two groups since they are not mutually exclusive.

[^11]analytics

A brief description of each benchmark, as well as its pros and cons are shown in the table below:

| Benchmark | Definition | \# of <br> Plans | Pros | Cons |
| :---: | :---: | :---: | :---: | :---: |
| 2017 SPH <br> Analytics Book of Business (General Population) | Includes all the Medicaid child samples (Non-CCC and CCC) that contracted with SPH Analytics to administer the 2017 CAHPS $^{\circledR} 5.0 \mathrm{H}$ survey, and submitted that data to NCQA. | 69 | * Provide the most up-to-date benchmark available reflecting the 2017 survey results ${ }^{13}$ <br> * Provides a benchmark for each question from the survey <br> * Permits precise percentile ranking of plan compared to benchmark | * Contains fewer plans than the Quality Compass ${ }^{\circledR}$ All Plans benchmark |
| 2017 SPH <br> Analytics Book of Business (CCC Population) | Includes all the Medicaid child samples (CCC) that contracted with SPH Analytics to administer the 2017 CAHPS $^{\circledR} 5.0 \mathrm{H}$ survey, and submitted that data to NCQA. | 13 | * Provide the most up-to-date benchmark available reflecting the 2017 survey results <br> * Provides a benchmark for each question from the survey <br> * Permits precise percentile ranking of plan compared to benchmark <br> * Provides a CCC benchmark | * Contains fewer plans than the Quality Compass ${ }^{\circledR}$ All Plans benchmark |
| 2016 Quality <br> Compass ${ }^{\circledR}$ All <br> Plans (General Population) | Includes all Medicaid child (Non-CCC and CCC) samples that submitted to NCQA in 2016. | 179 | * Contains more plans than the SPH Analytics Book of Business benchmark | * Only contains benchmarks for certain key questions, composites and rating questions |
| 2016 Quality <br> Compass ${ }^{\circledR}$ All <br> Plans (CCC <br> Population) | Includes all Medicaid child (CCC) samples that submitted to NCQA in 2016. | 53 | * Contains more plans than the SPH Analytics Book of Business benchmark <br> * Provides a CCC benchmark | * Only contains benchmarks for certain key questions, composites and rating questions |
| 2016 NCQA <br> 1-100 Benchmark (General Population) | A percentile benchmark (with values ranging from the first through the one hundredth percentile) calculated by NCQA and derived from Medicaid child data (Non-CCC and CCC) collected by NCQA in 2016. | 179 | * Utilized by SPH Analytics to calculate approximate percentile ranking of plan scores in relation to the Quality Compass ${ }^{\text {® }}$ All Plans benchmark | * Only contains benchmarks for certain key questions, composites, and rating questions |
| 2016 NCQA 1-100 Benchmark (CCC Population) | A percentile benchmark (with values ranging from the first through the one hundredth percentile) calculated by NCQA and derived from Medicaid child data (CCC) collected by NCQA in 2016. | 53 | * Utilized by SPH Analytics to calculate approximate percentile ranking of plan scores in relation to the Quality Compass ${ }^{\text {® }}$ All Plans benchmark <br> * Provides a CCC benchmark | * Only contains benchmarks for certain key questions, composites, and rating questions |

Please refer to the Technical Notes for additional information regarding these benchmarks.
${ }^{13}$ The 2017 Quality Compass ${ }^{\circledR}$ All Plans benchmark will be available in Fall of 2017.

Sum 25 th percentile.

* Summary Rates are defined by NCQA in its HEDIS 2017 CAHPS ${ }^{\circledR} 5.0 \mathrm{H}$ guidelines and generally represent the most favorable response percentages.
${ }^{* *}$ Ranking indicates where your plan's Summary Rate falls when compared to all other Medicaid child (Non-CCC and CCC) plans that submitted data to NCQA through SPH Analytics in 2017. Summary Rates that are below the 10th percentile are shown as '<10th.'
*** The 2017 SPH Analytics Book of Business consists of 69 Medicaid child (Non-CCC and CCC) samples that conducted surveys with SPH Analytics in 2017 and submitted data to NCQA.

analytics

## 4. Global Proportions and Accreditation

Pages 4A - 4C show graphical presentations of the percentage of members who answered each response choice, organized by composite category, attributes contained within each composite, additional single question measures, and each of the four global rating questions.

Summary Rates alone are not a complete indication of performance as they only address the most favorable responses. Global Proportions are a useful tool for understanding how dissatisfied, or even neutral, respondents are when they rate a particular question or composite area. Beside each chart is the equivalent Three-Point Score calculation.

## Example:

Summary Rate - 75\% (Always and Usually)
By focusing on all the response categories of a question, a high Summary Rate becomes less telling as: (1) a relatively large percentage of members are found to be very satisfied ("Always") or (2) a large proportion of the Summary Rate responses are "Usually" responses, rather than the more favorable response of "Always." As an example, the first case would show a higher average rating than the second, even though the Summary Rates are equal.

|  | Summary Rate |  |  |
| :--- | :---: | :---: | :---: |
|  | Always | Usually | Sometimes/Never |
| Case 1. | $65 \%$ | $10 \%$ | $25 \%$ |
| Case 2. | $15 \%$ | $60 \%$ | $25 \%$ |

Global Proportions are the basis of Three-Point Scores. In Three-Point scoring, a value of 1,2 , or 3 is assigned to each question response category, and then a numerical average is computed based upon the valid responses for each question. The Three-Point values are assigned to response option categories as follows:

| Scale 1 | Score <br> Value |
| :---: | :---: |
| Never | 1 |
| Sometimes | 1 |
| Usually | 2 |
| Always | 3 |

| Scale 2 | Score <br> Value |
| :---: | :---: |
| No | 1 |
| Yes | 3 |

| Scale 3 | Score <br> Value |
| :---: | :---: |
| $0-6$ | 1 |
| $7 \& 8$ | 2 |
| $9 \& 10$ | 3 |

Pages 4A - 4B display measures used in CAHPS ${ }^{\circledR}$ accreditation. The graphical presentation and Three-Point Score for composites and rating questions are shown on these pages. In addition, the measure's percentile threshold when compared to the accreditation benchmark and the 90th percentile benchmark is shown. The 90th percentile is the standard for achieving the maximum points possible for a particular CAHPS ${ }^{\circledR}$ accreditation measure.

## Accreditation Assessment <br> CAHPS ${ }^{\circledR}$ Measures

NCQA allows Medicaid product lines to be scored on the CAHPS ${ }^{\circledR}$ Health Plan Survey 5.0 H
adult version, on the child version, or on the child with chronic conditions version questions/composites. NCQA only requires organizations to submit one set (adult or child) of survey results. In the event that a health plan elects to use the CAHPS Health Plan Survey 5.0 H , child with chronic conditions version results for accreditation, scores are based upon results derived from the General Population.

For accreditation purposes, NCQA converts certain CAHPS ${ }^{\circledR} 5.0 \mathrm{H}$ results into Three-Point Scores as described in the previous section. The four rating questions (Health Care, Personal Doctor, Specialist, and Health Plan), the Coordination of Care measure, and the following composites are evaluated: Getting Needed Care, Getting Care Quickly, and Customer Service. Results are then compared against NCQA Three-Point percentile benchmarks and thresholds. Thresholds are based on HEDIS ${ }^{\circledR} /$ CAHPS $^{\circledR}$ benchmark data from other Medicaid child survey results.

NCQA will compare the plan's CAHPS ${ }^{\circledR} 5.0 \mathrm{H}$ survey results by product line to a national benchmark (the 90th percentile) and to national thresholds (the 75th, 50th, and 25th percentiles), which are published each year. Points are distributed according to how the plan meets or exceeds the percentile scores. The Rating of Health Plan survey item receives twice as many points as the other measures.

An accreditation assessment analysis utilizing your plan's Three-Point Scores is displayed on Page 4D. The section labeled "Approximate Plan Percentile Threshold" represents the approximate threshold your plan achieved, which is based upon your organization's ThreePoint Score when compared to the benchmark (located in the 2017 HEDIS ${ }^{\circledR} /$ CAHPS $^{\circledR}$ Percentiles ${ }^{14}$ column). The last three columns show the point distribution for each year in the current three-year accreditation cycle ( 2017 as well as 2015 and 2016, respectively). ${ }^{15}$

Page 4E displays how your plan's Three-Point Scores, derived from your CCC Population, compare to Three-Point Scores from your General Population.

Please refer to the Technical Notes for additional information about accreditation.

## HEDIS ${ }^{\circledR} /$ Clinical Measures

NCQA requires health plans seeking accreditation to submit specific HEDIS ${ }^{\circledR}$ measures. NCQA determines the HEDIS ${ }^{\circledR}$ measures portion of the score by comparing a health plan's results to a national benchmark (the 90th percentile) and to national thresholds (the 75th, 50th, and 25th percentiles).

Organizations using the CAHPS ${ }^{\circledR}$ Health Plan Survey 5.0 H child version (MCS) or the child with chronic conditions (CCC) version will receive an NA for the Flu Vaccination and Medical Assistance with Smoking and Tobacco Use Cessation measures. The scores will not count toward the NA threshold used to identify whether an organization is scored on CAHPS ${ }^{\circledR}$ or standards only.

Please refer to NCQA's Standards and Guidelines for the Accreditation of Health Plans (2017) and Accreditation Benchmarks and Thresholds (2017) documents for further details about HEDIS ${ }^{\circledR}$ scoring, benchmarks, and thresholds.

## 5. Segmentation Analyses

The CAHPS ${ }^{\circledR} 5.0 \mathrm{H}$ survey asks demographic questions about the respondent. This information allows for a market segmentation of your members. Reviewing the set of measures across the assortment of demographic categories may indicate a health plan's overall ability to meet the needs of a varied population.

Pages 5A - 5 I present Summary Rates ${ }^{16}$ for attributes, ratings, and composite scores organized across the following:

- Respondent's Age (Q78)
- Respondent's Education (Q80)
- Child's Health Status (Q58)
- Child's Mental/Emotional Health Status (Q59)
- Health Plan Rating (Q54)
- Personal Doctor Rating (Q41)
- Contact Customer Service (Q49)
- Received Help From Customer Service (Q50)
- Data Collection Method

The percentages represent the Summary Rate for each segment of a particular category. For example, in the table below, the Summary Rate for the Rating of Health Plan is the percentage of respondents who rated their health plan an " 8, " " 9 ," or " 10 ." The interpretation of this example would be, "Of the respondents with a high school education or less, 63\% gave their health plan a rating of ' 8 ,' ' 9 ,' or '10.' And, of the respondents with some college education or more, $58 \%$ gave their health plan a rating of ' 8, ' ' 9 ,' or ' 10 .'"

| 14 | Rating of Health Care | 127 | 55.9\% | 138 | 72.5\% | 16.6\% |
| 41 | Rating of Personal Doctor | 135 | 67.4\% | 161 | 80.1\% | 12.7\% |
| 48 | Rating of Specialist | 46 | 60.9\% | 66 | 69.7\% | 8.8\% |
| 54 | Rating of Health Plan | 153 | 64.7\% | 175 | 72.6\% | 7.9\% |

* Range is the difference between Summary Rates shown. The larger the number, the greater the difference in Summary Rates between segment groups for any given question/composite.
** Valid n refers to total number of respondents answering the item within the subgroup under the column heading.
Note: Select Summary Rates are defined by NCQA in its HEDIS 2017 CAHPS ${ }^{\circledR} 5.0 \mathrm{H}$ guidelines and generally represent the most favorable response percentages.

## 6. Correlation Analyses

Pages 6A and 6B provide attribute correlations with Rating of Health Plan (Q54), Rating of Health Care (Q14), and Rating of Personal Doctor (Q41). The correlations show the strength of the linear relationship between the individual attribute and the rating question. The correlation value can range from -1 to +1 with values close to +1 indicating a strong positive relationship. For example, a question that is highly correlated with Rating of Health Plan indicates that a low Summary Rate for that question is associated with a low Summary Rate for Rating of Health Plan, and a high Summary Rate for that question is associated with a high Summary Rate for Rating of Health Plan. Attributes considered to be highly correlated with the rating measures are shaded blue ( $r \geq 0.400$ ). Comparisons to the 2016 Quality Compass ${ }^{\circledR}$ All Plans benchmark are also shown with significance testing.

Page 6A shows correlations based on the General Population. Page 6B shows correlations based on the CCC Population.

## 7. Priority Matrix

General Population
SPH Analytics offers a graphical display of relative performance of survey composites and key measures, along with their relative 'importance' as it relates to Rating of Health Plan (Q54). The matrix on page 7A is divided into four sections. Composites and key measures are placed on the Priority Matrix according to the interaction between their correlation coefficient and percentile ranking within the 2017 Medicaid Child SPH Analytics Book of Business.

Composites and measures with moderate to strong correlations with Rating of Health Plan (Q54) and ranking at or above the 75th percentile are considered plan Strengths and are placed in the top right quadrant. Composites with moderate to strong correlations with Rating of Health Plan (Q54) but ranking below the 75th percentile are considered Top Priorities and are placed in the top left quadrant. The Monitor and Maintain quadrant includes those composites and measures that are weakly correlated with Rating of Health Plan (Q54) but rank at or above the 75th percentile. Composites that are weakly correlated with Rating of Health Plan (Q54) and rank below the 75th percentile are considered Medium Priorities and are placed in the bottom left quadrant.

## Chart 7A

Priority Matrix
Composite and Key Measure Correlations with Rating of Health Plan (Q54) and Percentile Rankings Medicaid Child with CCC CAHPS ${ }^{\circledR}$ General Population

Percentile Ranking

| Health Plan Domain Composites |  |
| :---: | :---: |
| denoted above with | O |
| Abbreviation | Definition |
| GNC | Getting Needed Care |
| CS | Customer Service |

| Health Care Domain Composites and Key Measure |  |
| :---: | :---: |
| denoted above with $\quad$ O |  |
| Abbreviation | Definition |
| GCQ | Getting Care Quickly |
| HWDC | How Well Doctors Communicate |
| SDM | Shared Decision Making |
| CC | Coordination of Care (Q40) |

Note 1: The 2017 SPH Analytics Book of Business consists of 69 Medicaid child (Non-CCC and CCC) samples that conducted surveys with SPH Analytics in 2017 and submitted data to NCQA.
Note 2: Ranking indicates where your plan's Summary Rate falls when compared to all other Medicaid child (Non-CCC and CCC) plans that submitted data to NCQA through SPH Analytics in 2017. Summary Rates that are below the 10th percentile are shown as <10th.'

## 8. Composite Analyses

General Population
The CAHPS ${ }^{\circledR} 5.0 \mathrm{H}$ survey is designed to use composite scores to facilitate the aggregation of information and the communication of results. Questions are combined into composite categories comprising a particular service area managed by your plan. Pages 8A - 8H present composite-level analyses for the CAHPS ${ }^{\circledR}$ measures used in accreditation scoring, which include the following:

- Getting Needed Care
- Getting Care Quickly
- Customer Service
- Coordination of Care (Q40)
- Rating of Health Care (Q14)
- Rating of Personal Doctor (Q41)
- Rating of Specialist (Q48)
- Rating of Health Plan (Q54)

## Summary Rate Trend Comparisons

This section compares your plan's current composite and attribute Summary Rates to trend results (if applicable). Significance testing is applied to determine whether an observed difference is too large to have occurred by chance alone. Cells highlighted in red denote the current year score is significantly lower when compared to trend data, cells highlighted in green denote the current year score is significantly higher when compared to trend data, no shading denotes that there was no significant difference between the scores or that there was insufficient sample size to conduct the statistical test. All significance testing is performed at the $95 \%$ significance level.

## Correlation with Rating Questions

In this section, attribute correlations are displayed as they relate to the Rating of Health Plan (Q54), Rating of Health Care (Q14), and Rating of Personal Doctor (Q41). Attributes considered to be highly correlated with the rating measures are shaded blue ( $r \geq 0.400$ ).

## Drill Down of Summary Rate Score Comparisons

This section shows a graphical representation of year-to-year comparisons of response options for the composite or rating item of interest. Response options are broken down according to three-point score groupings.

## Benchmark Summary Rate Score Comparisons

This section compares your plan's current and trend scores (if applicable) to the trend scores from the Quality Compass ${ }^{\circledR}$ All Plans and SPH Analytics Book of Business benchmarks. The SPH Analytics Book of Business consists of Medicaid child samples (Non-CCC and CCC) that conducted surveys with SPH Analytics and submitted data to NCQA. The Quality Compass ${ }^{\circledR}$ All Plans benchmark is the mean summary rate of plan-specific samples (Non-CCC and CCC) that submitted to NCQA.

Benchmark Percentile Rankings

2017 Final Report for Molina Healthcare of New Mexico Consumer Assessment of Healthcare Providers and Systems (CAHPS ${ }^{\circledR}$ ) Survey

This section compares your plan's current Summary Rate to the 2016 Quality Compass ${ }^{\circledR}$ All Plans benchmark. Your plan's approximate percentile rankings in relation to the Quality Compass ${ }^{\circledR}$ All Plans benchmark were calculated by SPH Analytics using information derived from the NCQA 1-100 Benchmark. Your percentile rank indicates where your plan's Summary Rate falls relative to the NCQA 1-100 Benchmark. Summary Rates that are below the 10th percentile are shown as "<10th." The Summary Rates for attributes at or above the 90th percentile are shaded dark green, while Summary Rates at or above the 75th percentile but below the 90th percentile are shaded light green, and Summary Rates at or above the 50th percentile but below the 75th are shaded beige. Additionally, attributes with Summary Rates at or above the 25th percentile but below the 50th percentile are shaded light orange and Summary Rates below the 25th percentile are shaded dark orange.

## Three-Point Score Trend Comparisons and Percentile Thresholds ${ }^{17}$

This section compares your plan's current Three-Point Scores to trend Three-Point Scores (if applicable). ${ }^{18}$ This section also compares your current Three-Point Scores to the NCQA percentile benchmark thresholds. Rankings indicate where your plan's score falls relative to the benchmark percentiles. Scores that are below the 25th percentile threshold are shown as "<25th." The Three-Point Scores for items at or above the 90th percentile are shaded dark green, while Three-Point Scores at or above the 75th percentile but below the 90th percentile are shaded light green, and Three-Point Scores at or above the 50th percentile but below the 75th are shaded beige. Additionally, items with Three-Point Scores at or above the 25th percentile but below the 50th percentile are shaded light orange and Three-Point Scores below the 25th percentile are shaded dark orange.

Benchmark thresholds are accurate as of the date of this report production. The source for the HEDIS ${ }^{\circledR} / \mathrm{CAHPS}{ }^{\circledR}$ Percentile benchmarks and thresholds is:
NCQA>Programs>Accreditation>Policy Updates and Supporting Documents>Trending and Benchmarks>Learn More>Benchmarks and Thresholds: 2017 Accreditation.

If a plan receives an NA (indicating the denominator was less than 100) the points for that measure are redistributed among the remaining required measures. An organization that has more than four CAHPS ${ }^{\circledR}$ NAs, or that exceeds ten NA or NB results between HEDIS ${ }^{\circledR}$ and CAHPS ${ }^{\circledR}$ for each product line, is scored based on the standards score only. Commendable is the highest status awarded to an organization scored on standards only.

## Global Proportions and Three-Point Scores

This section shows a graphical presentation of the percentage of members who selected each response choice. Global Proportions are a useful tool for understanding how dissatisfied, or even neutral, respondents are when they rate a particular question or composite area. Beside each chart is the equivalent, Unadjusted Three-Point Score calculation.

[^22]Three-Point Score Trend Comparisons
This section displays your plan's current Three-Point Scores and compares them to trend scores (if applicable).

Please refer to the individual report sections for additional information regarding the topics displayed on these pages.

Three-Point Score Trend Comparisons

[^25]
## 9. Technical Notes

Presented alphabetically by subject area

## Composite Categories

The NCQA core survey includes five composite categories. Each composite category represents an overall aspect of plan quality and is comprised of similar questions. For each composite, an overall score is computed. NCQA defines the composite score as the average of the Summary Rates or Three-Point scores of the questions comprising a composite. For example, the Getting Needed Care composite is the average of the Summary Rates or ThreePoint Scores of Q15 and Q46.

## Correlation Analysis

Correlation Analysis is run between attributes and the overall satisfaction variable as measured by Question 54 ("What number would you use to rate your health plan?"), as well as between attributes and Questions 14 and 41, Rating of Health Care and Rating of Personal Doctor, respectively. The Pearson's product moment correlation coefficient, $r$, is used to measure the strength of the linear association between each attribute and the overall satisfaction variables. The correlation value can range from -1 to +1 with values close to +1 indicating a strong positive correlation. These analyses are shown on Pages 6A and 6B.

## Demographic Categories

SPH Analytics collapses the age, race, and education group categories into fewer segments than those defined by the CAHPS ${ }^{\circledR} 5.0 \mathrm{H}$ survey. The consolidation of the demographic categories with small samples allows for more valid between-group statistical comparisons.

| Respondent's Age |  |
| :---: | :---: |
| CAHPS ${ }^{\circledR}$ | SPH Analytics |
| Under 18 | 24 or younger |
| 18-24 |  |

NCQA 1 - 100 Benchmark is a percentile benchmark (with values ranging from the first through the one hundredth percentile) calculated by NCQA and derived from Medicaid child data collected by NCQA in 2016. SPH Analytics utilizes this benchmark to calculate your plan's approximate percentile rankings in relation to the Quality Compass ${ }^{\circledR}$ All Plans benchmark. In keeping, the percentile ranks displayed on page 3B and in Section 8 Composite Analysis indicate where your plan's Summary Rates fall relative to the NCQA 1100 Benchmark.

## Opportunity Analysis (see Regression Analysis)

Quality Compass ${ }^{\circledR} 2016$ (Medicaid child - All Plans, CCC Population) data benchmark is a collection of CAHPS ${ }^{\circledR} 5.0 \mathrm{H}$ mean summary ratings ( 53 samples) for those Medicaid child plans (CCC samples with at least 100 valid responses per question item) allowing NCQA to use their data to be compiled into an aggregate, or national summary, without releasing their plan-level scores.

Quality Compass ${ }^{\circledR} 2016$ (Medicaid child - All Plans, General Population) data benchmark is a collection of CAHPS ${ }^{\circledR} 5.0 \mathrm{H}$ mean summary ratings ( 179 samples) for those Medicaid child plans (Non-CCC and CCC samples with at least 100 valid responses per question item) allowing NCQA to use their data to be compiled into an aggregate, or national summary, without releasing their plan-level scores.

## Question Scoring

NCQA Summary Rate \& Three-Point Categories for Composite Questions

| Composites/ <br> Response choices | Summary <br> Rate | Three- <br> Point | Questions/Attributes |  |
| :---: | :---: | :---: | :---: | :---: |
| Getting Needed Care |  | 1 | Q15 - In the last 6 months, how often was it easy to get the <br> care, tests, or treatment your child needed? |  |
| Never/Sometimes |  | 2 | Qummary <br> Rate | In the last 6 months, how often did you get an |
| appointment for your child to see a specialist as soon as you |  |  |  |  |
| needed? |  |  |  |  |

| Composites/ Response choices | Summary Rate | ThreePoint | Questions/Attributes |

## Rating Questions

There are four questions with responses scaled 0 to 10 in the CAHPS ${ }^{\circledR} 5.0 \mathrm{H}$ survey: Rating of Health Care (Q14), Rating of Personal Doctor (Q41), Rating of Specialist (Q48), and Rating of Health Plan (Q54), where zero represents "worst possible" and ten represents "best possible."

## Regression Analysis

Regression estimates are measures of association between independent variables (composites) and a dependent variable (overall satisfaction rating), while controlling for the effect of other variables through the use of a statistical model. A backward elimination, respondent-level, multiple linear regression model was fitted to the 2017 SPH Analytics Medicaid Child Book of Business benchmark. The SPH Analytics Book of Business consists of the 2017 Medicaid Child data from each of the 69 health plans that submitted to NCQA. The dependent variables in the model are measured by Question 54 ("What number would

2017 Final Report for Molina Healthcare of New Mexico Consumer Assessment of Healthcare Providers and Systems (CAHPS ${ }^{\circledR}$ ) Survey
you use to rate your child's health plan?"), Question 14 ("What number would you use to rate your child's health care?"), as well as Question 41 ("What number would you use to rate your child's personal doctor?"), all of which are scaled from 0 to 10 ("Worst possible" to "Best possible").

All composite questions are evaluated as potential independent variables in the analysis. These questions are scaled from 0 to $3(0,1,2$, and 3 ) for four-point scales in the direction of least favorable response to most favorable response. Those composite variables found to have a significant positive influence (as found by testing individual beta coefficients with a 0.05 level of significance) on Overall Satisfaction are reported as Key Drivers of overall satisfaction. The numbers reported alongside each composite, shown in Section 1 Executive Summary, are beta coefficients. These coefficients indicate the amount of change that takes place in the dependent variable for a one-unit change in the respondent level composite independent variable in the rescaled 0-3 units (with all other independent variables unchanged).

Within the context of the model, the higher the beta score, the larger the effect the composite has on overall satisfaction, with all other composites held constant.

Using the results of the regression analysis, SPH Analytics has developed the following Opportunity Analysis: if the composite Summary Rate is equal to or greater than the 75th percentile of the 2017 SPH Analytics Medicaid Child Book of Business Summary Rates and the composite is determined to be a Key Driver by the multiple linear regression analysis, the composite is considered a plan Strength. If the composite is a Key Driver and the Summary Rate is below the 50th percentile when compared to the 2017 SPH Analytics Medicaid Child Book of Business Summary Rates, the composite is considered a plan Opportunity. If a Key Driver has a Summary Rate that falls between the 50th and 75th percentiles when compared to the 2017 SPH Analytics Medicaid Child Book of Business Summary Rates it is suggested that the composite be monitored as it could become a Strength or Opportunity in the future, depending on the plan's success in that area.

## Report Sections

## Profile of Survey Respondents

- Health Status and Mental/Emotional Health Status are defined by member. Segmentation Analysis (Rating of Health Plan (Q54) by Respondent Demographics)
- Health Status and Mental/Emotional Health Status are defined by member. Benchmark Comparisons
- Ranking indicates where your plan's Summary Rate Score ranks when compared to the specified benchmark. Summary Rates that are below the $10^{\text {th }}$ percentile are shown as ' $<10^{\text {th }}$.'
Global Proportions
- Three-Point Score is the sum of the three scores: the percent in orange has a score of 1, the percent in light blue has a score of 2, and the percent in blue has a score of 3 . The composite Three-Point Score is the average if its attributes' Three-Point Scores.
- $90^{\text {th }}$ percentile represents the minimum score needed to obtain full accreditation points for this measure.
- If a plan receives and NA (indicating the denominator was less than 100) the points for that measure are redistributed among the remaining required measures. An organization that has more than four CAHPS® NAs, or which exceed ten NA or NB
results between HEDIS and CAHPS® for each product line, are scored based on the standards score only and the accreditation status is capped at commendable.
Accreditation Assessment
- Benchmark thresholds are accurate as of the date of this report production. The source for the HEDIS/CAHPS® Percentile benchmarks and thresholds is: NCQA>Programs>Accreditation>Policy Updates and Supporting Documents>Benchmarks and Thresholds >Learn More>Benchmarks and Thresholds: 2017 Accreditation.
Segmentation
- Range is the difference between Summary Rates shown. The larger the number, the greater the difference in Summary Rates between segment groups for any given question/composite.

## Correlations

- As the correlation coefficient approaches a value of 1.000, the association of the attribute with overall satisfaction is increased. Cells shaded dark blue have a correlation coefficient of equal to or greater than $r=0.400$.

## Question Summaries

- Members who respond "No" to Question 52 are included in "Always" of Question 53, per NCQA, Volume 3, HEDIS 2017 guidelines.
- The base for Questions 77 and 83 is the total number of respondents. Members were allowed to choose more than one response option; therefore, the sum of all figures may equal more than $100 \%$.

## Response Rate (General Population Only)

The sample size for Child Medicaid health plans is 1,650 in accordance with NCQA protocol, although plans may choose to over-sample their population if necessary. Please refer to the Glossary of Terms for more information on over-samples. The overall NCQA target number of complete responses is 411 .

Ineligible members include those who are deceased, members who do not meet the eligible population criteria, members with a language barrier, and members who are mentally or physically incapacitated. Non-responses include those members who have refused to participate in the survey or were added to the Do Not Call list, break-off/incomplete surveys, or members that reached a maximum attempt threshold and were unable to be contacted during the survey time period.

The formula for determining the response rate is the following:
Completed mail, telephone, and Internet (if applicable) surveys $=$ Response rate
Final sample size - Ineligible surveys

## Sampling Error

Sampling error can be thought of as the extent to which survey results may differ from what would be obtained if every eligible member in the sample had been surveyed. The size of such error depends largely on the percentage distributions (i.e., the number of respondents selecting each answer category) and the number of members surveyed. The more disproportionate the percentage distributions or the larger the sample size is, the smaller the error.

The following tables may be used in estimating approximate sampling error. The first table shows the range (plus or minus the figure shown) within which the population percentage could be expected to lay 95* out of 100 times a sample of that size and percentage distribution would be selected. The second table shows the range (plus or minus the figure shown) within which the population percentage could be expected to lay $90^{* *}$ out of 100 times a sample of that size and percentage distribution would be selected.

| Valid <br> Responses | Percentage Distribution |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | $50 / 50$ | $60 / 40$ | $70 / 30$ | $80 / 20$ | $90 / 10$ |
| 50 | 13.9 | 13.6 | 12.7 | 11.1 | 8.3 |
| 100 | 9.8 | 9.6 | 9.0 | 7.8 | 5.9 |
| 200 | 6.9 | 6.8 | 6.4 | 5.5 | 4.2 |
| 300 | 5.7 | 5.5 | 5.2 | 4.5 | 3.4 |
| 400 | 4.9 | 4.8 | 4.5 | 3.9 | 2.9 |
| 500 | 4.4 | 4.3 | 4.0 | 3.5 | 2.6 |
| 750 | 3.6 | 3.5 | 3.3 | 2.9 | 2.1 |
| 850 | 3.4 | 3.3 | 3.1 | 2.7 | 2.0 |

*95\% confidence interval

| Valid <br> Responses | Percentage Distribution |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | $50 / 50$ | $60 / 40$ | $70 / 30$ | $80 / 20$ | $90 / 10$ |
| 50 | 11.6 | 11.4 | 10.7 | 9.3 | 7.0 |
| 100 | 8.2 | 8.1 | 7.5 | 6.6 | 4.9 |
| 200 | 5.8 | 5.7 | 5.3 | 4.7 | 3.5 |
| 300 | 4.7 | 4.7 | 4.4 | 3.8 | 2.8 |
| 400 | 4.1 | 4.0 | 3.8 | 3.3 | 2.5 |
| 500 | 3.7 | 3.6 | 3.4 | 2.9 | 2.2 |
| 750 | 3.0 | 2.9 | 2.8 | 2.4 | 1.8 |
| 850 | 2.8 | 2.8 | 2.6 | 2.3 | 1.7 |

**90\% confidence interval
The sampling error table is used in the following manner: assume that "overall rating of health plan" received a Summary Rate of seventy percent (70.0\%) from a sample of 500 valid responses. For a 95\% confidence interval, look at the table where the sample size of 500 intersects the percentage distribution of 70/30. The margin of error for this sample size is four percentage points (4.0\%). Therefore, on average, in 95 out of 100 similar samples, the $95 \%$ confidence interval (e.g., $66.0 \%$ to $74.0 \%$ ) will span the true unknown population percentage.

## SPH Analytics of Business (CCC Population)

The SPH Analytics Book of Business (calculated on a plan-level) consists of all Medicaid Child samples (Non-CCC and CCC) that were conducted by SPH Analytics and submitted data to NCQA. In 2017, there were 13 samples included in the Book of Business. This benchmark is shown throughout the report.

2017 Final Report for Molina Healthcare of New Mexico Consumer Assessment of Healthcare Providers and Systems (CAHPS ${ }^{\circledR}$ ) Survey

## SPH Analytics of Business (General Population)

The SPH Analytics Book of Business (calculated on a plan-level) consists of all Medicaid Child samples (Non-CCC and CCC) that were conducted by SPH Analytics and submitted data to NCQA. In 2017, there were 69 samples included in the Book of Business. This benchmark is shown throughout the report and is used in the Opportunity Analysis.

## Statistical Significance

A statistically significant hypothesis testing result means that, based on the sample(s), conditions/assumptions, and level of significance, there is sufficient evidence to conclude the alternate hypothesis. For example, when testing for a difference between a population Summary Rate and a set constant score (e.g., SPH Analytics Book of Business), statistical significance would mean that there is sufficient support for the statement that there is a difference between the population Summary Rate and the set constant score. As another example, when testing to see if there is a difference between last year's population Summary Rate and this year's population Summary Rate, statistical significance would mean that there is sufficient evidence for the statement that the population Summary Rates are different.

## Summary Rate

Summary Rates are single statistics generated for a survey question as specified by NCQA. In general, Summary Rates represent the percentage of respondents who chose the most favorable response option(s) ("Always" and "Usually;" "Yes;" or " 8 " to " 10 "). Not all questions are assigned a Summary Rate by NCQA.

Summary Rate categories for the rating questions represent respondents who answered "8," " 9, " or "10." In addition to the traditional NCQA defined Summary Rate calculation for rating questions (responses " 8 ", " 9 ", and "10"), Top Box Scores are also calculated using " 9 " and "10."

Members who responded "No" to Q52 are recoded as "Always" in Q53 and are, therefore, included in the Summary Rate of Q53.

The Summary Rate for each composite category and additional measure is as follows:
Getting Needed Care; Getting Care Quickly; How Well Doctors Communicate; Customer Service; Coordination of Care; Providing Needed Information; and Ease of Filling Out Forms: Summary Rate represents the percentage of members who responded "Always" or "Usually."

Health Promotion and Education: Summary Rate represents the percentage of members who responded "Yes."

Shared Decision Making: Summary Rate represents the percentage of members who responded "Yes."

## Survey Administration Protocol

Children ages 0 to 17 from the MCO's membership database is used as a sample. The first sample $(1,650)$ is randomly selected to represent the General Population. A supplemental sample is pulled based on the member's claims experiences. Members with claims experiences that indicate a probable chronic care condition are assigned a prescreen status
code of 2. A sample of 1,840 , with a prescreen status code of 2 , are randomly selected from the remaining database pool. In MCOs with fewer members than the required sample size, the supplemental sample includes all members with a prescreen status code of 2 who were not already selected for the General Population sample. Note: The samples sizes stated above are standard samples sizes. Plans may oversample their population if they choose.

The CAHPS ${ }^{\circledR} 5.0 \mathrm{H}$ protocol allows plans to select one of two options for survey administration: 1) a five-wave mail-only methodology (three questionnaire mailings and two reminder postcards) or 2) a mixed methodology (mail and telephone), which includes four waves of mail (two questionnaire mailings and two reminder postcards) with a telephone follow-up of at least three attempts. NCQA also allows pre-approved enhanced methodologies, which can include an Internet component of the survey (questionnaire mailings contain an Internet option).

| Mixed Methodology Tasks | Time Frame |
| :--- | :---: |
| First questionnaire and cover letter sent to the member. | 0 days |
| A postcard reminder is sent to non-respondents 4 to 10 days after the first <br> questionnaire. | $4-10$ days |
| A second questionnaire with replacement cover letter is sent to non-respondents <br> approximately 35 days after the mailing of the first questionnaire. | 35 days |
| A second postcard reminder is sent to non-respondents 4 to 10 days after mailing <br> the second questionnaire. | $39-45$ days |
| Telephone calls by CATI (computer-assisted telephone interviews) are conducted <br> for non-respondents approximately 21 days after the mailing of the second <br> questionnaire. | 56 days |
| Telephone contact is made to all non-respondents such that at least 3 calls are <br> attempted at different times of day, on different days, and in different weeks. | $56-70$ days |
| Telephone follow-up is completed approximately 14 days after initiation. | 70 days |
| Mail-Only Methodology Tasks | Time Frame |
| First questionnaire and cover letter sent to the member. |  |
| A postcard reminder is sent to non-respondents 4 to 10 days after the first <br> questionnaire. | $4-10$ days |
| A second questionnaire with replacement cover letter is sent to non-respondents <br> approximately 35 days after the mailing of the first questionnaire. | 35 days |
| A second postcard reminder is sent to non-respondents 4 to 10 days after mailing <br> the second questionnaire. | $39-45$ days |
| A third questionnaire and cover letter is sent to non-respondents approximately 25 <br> days after mailing the second questionnaire. | 60 days |
| Allow 21 days for the third questionnaire to be returned by the member. | 81 days |

## Three-Point Scores

Three-Point scoring assigns a value of 1,2 , or 3 to each question response category and then computes a numerical average based upon the valid responses for each question. The Three-Point values are assigned to response option categories as follows:

analytics Consumer Assessment of Healthcare Providers and Systems (CAHPS ${ }^{\circledR}$ ) Survey

| Sometimes | 1 |
| :---: | :---: |
| Usually | 2 |
| Always | 3 |

| Yes | 3 |
| :---: | :---: |

| $7 \& 8$ | 2 |
| :---: | :---: |
| $9 \& 10$ | 3 |

The "mean of means" method is used in computing the Three-Point composite score. Each question is weighted equally within a composite regardless of the number of valid responses. These composite scores may be in slight variance to the scores shown elsewhere in the report (comparisons by member age, gender, etc.) where scores are calculated as weighted means based on the actual number of respondents answering each question.

## Unanswered Questions

CAHPS ${ }^{\circledR} 5.0 H$ prescribes that if a respondent answered a question by marking more than one response (not including Q77 \& Q83), that response is considered a "multiple mark." A missing/multiple mark response is NOT assigned any value or used to calculate satisfaction scores.

## Z-Test

To test for true differences in population score(s), statistical inference methods are applied. In particular, hypothesis testing is done to draw conclusions about differences in scores between a population and a set constant (e.g., a Summary Rate versus the SPH Analytics Book of Business) or between different populations (e.g., a Summary Rate for this year versus a Summary Rate for last year). The hypothesis of no difference is rejected if the absolute value of the test statistic exceeds a critical value corresponding to a level of significance. The test statistic used depends on which of these types of hypothesis tests are performed.

When checking for a statistically significant difference between a Summary Rate for a population and a set constant score (e.g., SPH Analytics Book of Business)-with various conditions/assumptions-SPH Analytics uses the statistical test that follows:

$$
z=\frac{\hat{p}-p_{0}}{\sqrt{\frac{p_{0} q_{0}}{n}}}
$$

where
$\hat{p}=$ Summary Rate from the sample
$p_{0}=$ Set constant score for comparison
$q_{0}=1-($ Set constant score $)=\left(1-p_{0}\right)$
$n$ = Sample size
For hypothesis testing of composites, $n$ equals the maximum denominator of the composite questions. With a large sample size $\left(n_{1} \hat{p}_{1} \geq 5, n_{1}\left(1-\hat{p}_{1}\right) \geq 5, n_{2} \hat{p}_{2} \geq 5\right.$, and $\left.n_{2}\left(1-\hat{p}_{2}\right) \geq 5\right)$, the $z$-statistic has a distribution that can be treated as the standard normal distribution. Thus, the hypothesis that the population "Summary Rate" equals the set constant score is rejected at a 0.05 level of significance when the absolute value of the $z$-statistic exceeds 1.96 (obtained from cumulative standard normal distribution table).

The second hypothesis-testing situation involves testing for statistically significant differences between two population percents (or proportions), e.g., two population Summary Rates. When comparing the population percentages (or proportions)-with various conditions/ assumptions-the appropriate test statistic is the z -statistic as follows:

$$
z=\frac{\hat{p}_{1}-\hat{p}_{2}}{\sqrt{\hat{p} \hat{q}\left(\frac{1}{n_{1}}+\frac{1}{n_{2}}\right)}}
$$

where

$$
\hat{p}_{1}=\text { Summary Rate from the } 1^{\text {st }} \text { sample }
$$

$$
\hat{p}_{2}=\text { Summary Rate from the } 2^{\text {nd }} \text { sample }
$$

$$
n_{1}=\text { Size of the sample from the } 1^{\text {st }} \text { population }
$$

$$
n_{2}=\text { Size of the sample from the } 2^{\text {nd }} \text { population }
$$

$$
\hat{p}=\text { Pooled Summary Rate, }
$$

$$
\hat{p}=\frac{n_{1} \hat{p}_{1}+n_{2} \hat{p}_{2}}{n_{1}+n_{2}}
$$

$$
\hat{q}=1-(\text { Pooled Summary Rate })
$$

For hypothesis testing of composites, n equals the maximum denominator of the composite questions. With large sample sizes $\left(n_{1} \hat{p}_{1} \geq 5, n_{1}\left(1-\hat{p}_{1}\right) \geq 5, n_{2} \hat{p}_{2} \geq 5\right.$, and $\left.n_{2}\left(1-\hat{p}_{2}\right) \geq 5\right)$, the $z$-statistic has a distribution that can be treated as the standard normal distribution. Thus, the hypothesis that the populations under comparison have equal population Summary Rates is rejected at a 0.05 level of significance when the absolute value of the $z$-statistic exceeds 1.96 (obtained from the cumulative standard normal distribution table).

## Sample Survey Tool

Your Extended Family.

## sURVEYINSTRUCTIONS

- Answer each question by marking the box to the left o your answer.
- You are sometimes told to skip over some questions in this survey. When this happens you will see an arrow with a note that tells you what question to answer next ike this
$\boxtimes$ Yes $\rightarrow$ If Yes, Go to Question 1
$\square$ No

Personally identifiable information will not be made public and will only be released in accordance with federal laws and regulations.
You may choose to answer this survey or not. If you choose not to, this will not affect the benefits you get. You may notice a number on the cover of this survey. This number is ONLY used to let us know if you returned your survey so we don't have to send you reminders.

If you want to know more about this study, please call 1-877-476-7538.

Please answer the questions for the child listed on the envelope. Please do not answer for any other children.

1. Our records show that your child is now in

Molina Healthcare of New Mexico
Is that right?
$\square_{1}$ Yes $\rightarrow$ If Yes, Go to Question
$\square_{2}$ No
2. What is the name of your child's health plan? (please print)

THANK YOU. Please return the completed survey in the postage-paid envelope.

## YOUR CHIL'S HEALTH CAR

 IN THE LAST 6 MONTHSThese questions ask about your child's health care. Do not include care your child got when he or she stayed overnight in a hospital. Do not include the times your child went for dental care visits.
3. In the last $\mathbf{6}$ months, did your child have an illness, injury, or condition that needed care right away in a clinic, emergency room, or doctor's office?

## $\square$ Yes

$\square$ No $\rightarrow$ If No, Go to Question 5
4. In the last 6 months, when your child needed care right away, how often did your child get care as soon as he or she needed?
$\square 1$ Never
$\square_{2}$ Sometimes
Usually
$\square$ Always
5. In the last 6 months, did you make any appointments for a check-up or routine care for your child at a doctor's office or clinic?
$\qquad$ $\square_{2} \mathrm{No} \rightarrow$ If No, Go to Question 7
6. In the last 6 months, when you made an appointment for a check-up or routine care for your child at a doctor's office or clinic, how often did you get an appointment as soon as your child needed?

## $\square 1$ Never

$\square \square_{2}$ Sometimes
$\square_{3}$ Usually
$\square_{4}$ Always
7. In the last 6 months, not counting the times your child went to an emergency room, how many times did he or she go to a doctor's office or clinic to get health care?
$\square_{1}$ None $\boldsymbol{\rightarrow}$ If None, Go to Question 16
$\square 21$ time
$\square_{3} 2$
$\square_{4} 3$
$\square_{5} 4$
5 to 9
10 or more times
8. In the last 6 months, did you and your child's doctor or other health provider talk about specific things you could do to prevent illness in your child?
$\square 1$ Yes
$\square_{2}$ No
9. In the last 6 months, how often did you have your questions answered by your child's doctors or other health providers?
1 Never
$\square_{2}$ Sometimes
$\square_{4}$ Usually
10. In the last 6 months, did you and your child's doctor or other health provider talk about starting $\square_{1} \mathrm{Yes}$ $\nabla_{2}$ Yos $\rightarrow$ If No, Go to Question 14
11. Did you and a doctor or other health provider talk about the reasons you might want your child to about the reasons
take a medicine?
$\square 1$ Yes
$\square \square_{2} \mathrm{No}$
12. Did you and a doctor or other health provider talk about the reasons you might not want your child to take a medicine?
$\square 1$ Yes
13. When you talked about your child starting or stopping a prescription medicine, did a doctor or other health provider ask you what you thought was best for your child?
$\square{ }_{1}$ Yes
$\square_{2}$ No
14. Using any number from 0 to 10 , where 0 is the worst health care possible and 10 is the best health worst health care possible and 10 is the best health
care possible, what number would you use to rate all your child's health care in the last 6 months? Worst health care Best health care possible possible $\begin{array}{lllllllllll}0 & 1 & 2 & 3 & 4 & 5 & 6 & 7 & 8 & 9 & 10\end{array}$
15. In the last 6 months, how often was it easy to get the care, tests, or treatment your child needed?
$\square \square_{1}$ Never
$\square_{2}$ Sometimes
$\square^{3}$ Usually
16. Is your child now enrolled in any kind of school or daycare?
$\square 1$ Yes
$\square_{2}$ No $\rightarrow$ If No, Go to Question 19
17. In the last 6 months, did you need your child's doctors or other health providers to contact a school or daycare center about your child's health or health care?
$\square$ Yes
$\mathrm{No} \rightarrow$ If No, Go to Question 19
18. In the last 6 months, did you get the help you needed from your child's doctors or other health providers in contacting your child's school or daycare?
$\square_{2}$ No

## SPECIALIZED SERVICES

19. Special medical equipment or devices include a walker, wheelchair, nebulizer, feeding tubes, or oxy on equipment. In the last 6 months, dis you get or try to get any special medical equipment or $\square$ Yes Yes
$\square_{2} \mathrm{No} \rightarrow$ If No, Go to Question 22
20. In the last 6 months, how often was it easy to get special medical equipment or devices for your child?
$\square 1$ Never
$\square_{2}$ Sometimes
$\square_{3}$ Usually
21. Did anyone from your child's health plan, doctor's office, or clinic help you get special medica equipment or devices for your child?
$\square_{1}$ Yes
22. In the last 6 months, did you get or try to ge special therapy such as physical, occupational, or speech therapy for your child?
$\square 1$ Yes
$\square_{2}$ No $\rightarrow$ If No, Go to Question 25
23. In the last 6 months, how often was it easy to get this therapy for your child?
$\square_{1}$ Never
$\square_{2}$ Sometimes
$\square_{3}$ Usually
24. Did anyone from your child's health plan, doctor's office, or clinic help you get this therapy for your
child?
$\square_{1}$ Yes
25. In the last 6 months, did you get or try to ge treatment or counseling for your child for an emotional, developmental, or behavioral problem?
$\square 1$
$\square_{2}$ Yes $\rightarrow$ If No, Go to Question 28
26. What is your age?
$\square 1$ Under 18
$\square \square_{2} 18$ to 24
$\square_{3} 25$ to 34
$\square_{4} \quad 35$ to 44
$\square_{5} 45$ to 54
$\square 65$ to 64
$\square 75$ to 74
27. Are you male or female?
$\square 1$ Male
$\square_{2}$ Female
28. What is the highest grade or level of school that you have completed?
$\square 1$ 8th grade or less
$\square$, Some high school, but did not graduate
$\square_{3}$ High school graduate or GED
$\square_{4}^{3}$ Sigh school graduate or GED
$\square_{5}^{4}$ 4-year college graduate
$\square_{6}$ More than 4-year college degree
29. How are you related to the child?
$\square 1$ Mother or father
$\square_{2}^{2}$ Grandparent
$\square_{3}$ Aunt or uncle

$\square_{2}$ Sometim
$\square_{3}$ Usually
$\square_{4}$ Always
37. In the last 6 months, how often did your child's personal doctor spend enough time with your persona
child?
$\square 1$ Never
$\square_{2}$ Sometimes
$\square_{3}$ Usually
38. In the last 6 months, did your child's personal doctor talk with you about how your child is feeling, growing, or behaving?
$\square_{1} \mathrm{Yes}$
39. In the last 6 months, did your child get care from a doctor or other health provider besides his or her personal doctor?
$\square 1$ Yes
$\square_{2}$ Yes $\rightarrow$ If No, Go to Question 41
40. In the last 6 months, how often did your child's personal doctor seem informed and up-to-date about the care your child got from these doctors or other health providers?
$\square 1$ Never
$\square_{2}$ Sometimes
$\square$ Usually
$\square_{4}$ Always
41. Using any number from 0 to 10 , where 0 is the worst personal doctor possible and 10 is the best personal doctor possible, what number would you use to rate your child's personal doctor?

Worst personal doctor Best personal doctor possible possible $\begin{array}{lllllllllll}0 & 1 & 2 & 3 & 4 & 5 & 6 & 7 & 8 & 9 & 10\end{array}$ $\square \square \square \square \square \square \square \square \square \square$
42. Does your child have any medical, behavioral, or other health conditions that have lasted for more than 3 months?
$\square$
$\square_{2}$ Yes $\rightarrow$ If No, Go to Question 45
43. Does your child's personal doctor understand how these medical, behavioral, or other health conditions affect your child's day-to-day life? $\square_{2}{ }_{2} \mathrm{Yes}$
44. Does your child's personal doctor understand how your child's medical, behavioral, or other health conditions affect your family's day-to-day life? $\square 1$ Yes
$\square_{2}$ No
GETTING HEALTH CARE FROM SPECIALISTS
When you answer the next questions, do not include dental visits or care your child got when he or she stayed overnight in a hospital.
45. Specialists are doctors like surgeons, heart doctors, allergy doctors, skin doctors, and other doctors who specialize in one area of health care In the last 6 months, did you make any appointments for your child to see a specialist? $\square_{1}$ Yes
$\square_{2}$ No $\rightarrow$ If No, Go to Question 49
46. In the last 6 months, how often did you get an appointment for your child to see a specialist as soon as you needed?
$\square 1$ Never
$\square_{2}$ Sometimes
$\square_{3}$ Usually
47. How many specialists has your child seen in the last 6 months?
$\square_{1}$ None $\rightarrow$ If None, Go to Question 49
$\square_{2} 1$ specialist
$\square_{3} 2$
$\square_{4} 3$
$\square_{5} 4$
$\square_{6} 5$ or more specialists
48. We want to know your rating of the specialist you child saw most often in the last 6 months. Using any number from 0 to 10 , where 0 is the worst specialist possible and 10 is the best specialist possible, what specialist?

$\begin{array}{lllllllllll} & 1 & 2 & 3 & 4 & 5 & 6 & 7 & 8 & 9 & 10\end{array}$

## The next questions ask about your experience with your

 child's health plan.49. In the last 6 months, did you get information or help from customer service at your child's health plan?
$\square_{1}$ Yes
$\square_{2} \mathrm{No} \rightarrow$ If No, Go to Question 52
50. In the last 6 months, how often did customer service at your child's health plan give you the information or help you needed?
$\square 1$ Never
$\square_{2}$ Sometimes
$\square_{3}$ Usually
51. In the last 6 months, how often did customer service staff at your child's health plan treat you with courtesy and respect?

## $\square 1$ Never <br> $\square_{2}$ Sometimes <br> $\square_{4}^{3}$ Always

52. In the last 6 months, did your child's health plan give you any forms to fill out?
$\square 1$ Yes
$\mathrm{No} \rightarrow$ If No, Go to Question 54
53. In the last 6 months, how often were the forms from your child's health plan easy to fill out?
$\square 1$ Never
$\square_{2}$ Sometimes
$\square_{3}$ Usually
$\square_{4}$ Always
54. Using any number from 0 to 10 , where 0 is the worst health plan possible and 10 is the best health plan possible, what number would you use to rate your child's health plan?
Worst health plan
Best health plan
possible
$\square \quad \square \quad \square \quad \square \quad \square \quad 5 \quad \square \quad \square \quad \square \quad \square \quad \square \quad 8 \quad 9 \quad 10$

## PRESCRIPTION MEDICINES

55. In the last 6 months, did you get or refill any prescription medicines for your child?
$\square_{1}$ Yes
$\square_{2}$ No $\rightarrow$ If No, Go to Question 58
56. In the last 6 months, how often was it easy to get prescription medicines for your child through his or her health plan?
$\square 1$ Never
$\square_{2}$ Sometimes
$\square \square_{3}$ Usually
$\square_{4}$ Always
57. Did anyone from your child's health plan, doctor's office, or clinic help you get your child's prescription medicines?

## $\square_{1}$ Yes

ABOUT YOUR CHILD AND YOU
58. In general, how would you rate your child's overall health?
$\square 1$ Excellent
$\square_{2}$ Very Good
$\square_{3}$ Good
$\square_{4}$ Fair
$\square_{5}$ Poor
59. In general, how would you rate your child's overall mental or emotional health?

$$
\begin{aligned}
& \square_{1} \text { Excellent } \\
& \square_{2} \text { Very Goood } \\
& \square_{3} \text { Good } \\
& \square_{4} \text { Fair } \\
& \square_{5} \text { Poor }
\end{aligned}
$$

60. Does your child currently need or use medicine prescribed by a doctor (other than vitamins)? $\square$ Yes
$\square_{2} \mathrm{No} \rightarrow$ If No, Go to Question 63
61. Is this because of any medical, behavioral, or other health condition?
$\square 1$ Yes
$\square_{2} \mathrm{No} \rightarrow$ If No, Go to Question 63
62. Is this a condition that has lasted or is expected to last for at least 12 months?
$\square_{1}$ Yes
63. Does your child need or use more medical care, more mental health services, or more educationa services than is usual for most children of the same age?
$\square 1$ Yes
$\mathrm{No} \rightarrow$ If No, Go to Question 66
64. Is this because of any medical, behavioral, or other health condition?
$\square_{1}$ Yes
$\square_{2} \mathrm{No} \rightarrow$ If No, Go to Question 66
65. Is this a condition that has lasted or is expected to last for at least 12 months?
$\square_{1}$ Yes
66. Is your child limited or prevented in any way in his or her ability to do the things most children of the same age can do?
$\square_{1} \mathrm{Yes}$
$\square_{2} \mathrm{No} \rightarrow$ If No, Go to Question 69
67. Is this because of any medical, behavioral, or other health condition?
$\square_{2}$ Yes $\rightarrow$ If No, Go to Question 69
68. Is this a condition that has lasted or is expected to last for at least 12 months?
$\square_{1}$ Yes
$\square_{2}$ No
69. Does your child need or get special therapy such as physical, occupational, or speech therapy? $\square_{1}$ Yes
$\square_{2}$ No $\rightarrow$ If No, Go to Question 72
70. Is this because of any medical, behavioral, or other health condition?
$\square_{1}$ Yes
$\square_{2}^{1} \mathrm{No} \rightarrow$ If No, Go to Question 72
71. Is this a condition that has lasted or is expected to last for at least 12 months?
$\square_{1}$ Yes
72. Does your child have any kind of emotional, developmental, or behavioral problem for which he or she needs or gets treatment or counseling?
$\square_{1}$ Yes
$\square_{2} \mathrm{No} \rightarrow$ If No , Go to Question 74
73. Has this problem lasted or is it expected to last for at least 12 months?
$\square_{2} \square_{2} \mathrm{Nos}$
74. What is your child's age?
$\square_{00}$ Less than 1 year old
$\square$ YEARS OLD (write in)
75. Is your child male or female?
$\square_{1}$ Male
$\square_{2}$ Female
76. Is your child of Hispanic or Latino origin or descent?
$\square$ Yes, Hispanic or Latino
$\square_{2}$ No, not Hispanic or Latino
77. What is your child's race? Mark one or more
$\square$ A White
$\square_{\text {B }}$ Black or African-American
$\square \mathrm{c}$ Asian
$\square$ Dative Hawaiian or other Pacific Islander
$\square_{\mathrm{E}}$ American Indian or Alaska Native
$\square_{\mathrm{F}}$ Other

analytics Consumer Assessment of Healthcare Providers and Systems (CAHPS ${ }^{\circledR}$ ) Survey

## 10. Banner Tables

The tables in the following section show detailed results for each question in your survey. The banner-points, across the top banner table, include categories such as: (1) demographic groups (Respondent's Age, Respondent's Education, Child's Health Status, and Child's Mental Health Status), (2) survey items (Health Plan and Personal Doctor Ratings, Contact Customer Service, and Got Information/Help From Customer Service), and (3) Data Collection Method. In order to aid you in viewing the data contained in these tables, the following explanation is provided.

The different categories by which the data are "sliced" are presented as column headers. Each category has a set of possible response choices that are listed immediately below the headers. The left-most column in each table is labeled "Total" and shows results for the entire set of valid responses.

On the left side of the page are three row headers: "Total Eligible," "Total Valid Responses," and "No Answer." "Total Eligible" represents the number of possible responses that meet the criteria for inclusion into the given question. For questions that are asked of all respondents, this figure will typically equal 513 (General Population) or 332 (CCC Population), which is the valid number of responses to the current survey. "Total Valid Responses" shows how many of the total respondents provided valid answers to the given question. Finally, "No Answer" is the number of individuals who did not respond to the question, even though they were eligible to do so.

It should be noted that, in some cases, a survey response choice shows only the number of respondents providing that answer with no percentage. These response options are not considered valid responses by NCQA guidelines, and are therefore omitted from the percentage calculations.

In some tables, an additional row is added to show Summary Rates. These scores are a single question response or combination of question responses considered to be favorable. It is included at the bottom of each of these tables and is shown with the response option, or options, that make up the score listed beside it.

Information regarding the statistical testing of results is shown in the lower left corner of each table. The first line displays the Comparison Groups. These are the columns (denoted by upper case letters and separated by a slash (/)) in which statistical tests are run. Columns (B) and (C), for example, show results for Males and Females. These columns are compared in the statistical test to each other, but not to any other columns. If a letter is present, whether upper or lower case, its corresponding percentage is significantly higher than the specified percentages within its comparison group. Note that when comparing groups, the Z-Test is only valid for large sample sizes. See Z-Test in Technical Notes.

The second line shows the type or types of statistical tests that are included in the table. The last two lines define the meaning of the upper and lower case letters. If a percentage has an upper case letter beneath it, a difference exists at the 0.05 level of significance. A lower case letter denotes a difference at the 0.10 level of significance.

A banner table example is presented on the following page with key points noted.

|  | Total | Male | Female |
| :---: | :---: | :---: | :---: |
|  | (A) | (B) | (C) |
| Total Eligible | $433{ }^{1}$ | 22 | 407 |
| Total Valid Responses | $429{ }^{2}$ | 22 | 403 |
|  | 100.0\% | 100.0\% | 100.0\% |
| No Answer | $4^{3}$ | - | 4 |
| Yes | 198 | 6 | 189 |
|  | 46.2\% | 27.3\% | 46.9\% |
| No | 231 | 16 | 214 |
|  | 53.8\% | 72.7\% | 53.1\% |
|  |  | $\mathrm{C}^{5}$ |  |

1 - For the given question, 433 respondents were eligible to answer. For questions asked of all respondents, this figure will equal the number of complete surveys. In other cases, it will equal the number of appropriate responses to a gate question. Gate questions are those that filter out respondents who would not logically be able to answer follow-up questions. For example, people who say that they do not have a personal doctor would not be able to provide a doctor rating, and so they are filtered out of the response set for the rating question.

2 - Of those who were eligible to answer this question, 429 provided valid responses.
3 - Four respondents-all Female-who were eligible to answer the question did not provide an answer.

4 - Females and Males provided a significantly different percentage of "Yes" responses. The " $B$ " below the percentage refers to the group in column B - in this case, Males - and signifies that the $46.9 \%$ is significantly different than $27.3 \%$. Because the " B " is capitalized, we know that the difference is significant at the 0.05 level of significance.

5 - Females and Males provided significantly different percentages of "No" responses. As in the previous note, the " C " refers to the group in column C-Females-and is significant at the 0.05 level of significance.

Please refer to the Technical Notes for additional information about banner tables.

## Table Description

1 Q1. Our records show that your child is now in Mblina Healthcare of New Mexico. Is that right?
2 Q3. In the last 6 months, did your child have an illness, injury, or condition that needed care right aw ay in a clinic, emergency room or doctors office?
3 Q4. (GOQ)
Q5 in the last 6 mor
Q6. (GOQ) In the last 6 months, when you made an appointment for a check-up or routine care for your child at a doctors office or clini Q6. (GOQ) In the last 6 months, when you made an appointment for a check-up or routine care for your child at a doctors office or clinic. Q7. In the last 6 months, not counting the times your child went to an emergency room, how many times did he or she go to a doctors office or clinic to get health care?
Q8. (HPE) In the last 6 months, did you and your childs doctor or other health provider talk about specific things you could do to prevent illness in your child?
Q9. (FOC-GN) In the last 6 months, how often did you have your questions answered by your childs doctors or other health providers?
Q10. In the last 6 months, did you and your childs doctor or other health provider talk about starting or stopping a prescription medicine for your child?
10 Q11. (SDM Did you and a doctor or other health provider talk about the reasons you might want your child to take a medicine?

11 Q12. (SDM) Did you and a doctor or other health provider talk about the reasons you might not want your child to take a medicine?
12 Q13. (SDM) When you talked about your child starting or stopping a prescription medicine, did a doctor or other health provider ask you what you thought was best for your child?
13 Q14. Using any number from 0 to 10 , where 0 is the worst health care possible and 10 is the best health care possible, what number would you use to rate all your childs health care in the last 6 months?
14 Q15. (GNC) in the last 6 months, how often was it easy to get the care, tests, or treatment your child needed?
15 Q16. Is your child now enrolled in any kind of school or daycare?
16 Q17. In the last 6 months, did you need your childs doctorsor other heath providers to contact a school or daycare center about your childs health or health care?
17 Q18. (OC-OOC) In the last 6 months, did you get the help you needed from your childs doctors or other health providers in contacting your childs school or daycare?
Q19. Special medical equipment or devices include a walker, wheelchair, nebulizer, feeding tubes, or oxygen equipment. In the last 6 months, did you get or try to get any special medical equipment or devices for your child?
19 Q20. (ATSS) In the last 6 months, how often was it easy to get special medical equipment or devices for your child?
Q21. Did anyone fromyour childs health plan, doctors office, or clinic help you get special medical equipment or devices for your child?
21 Q22. In the last 6 months, did you get or try to get special therapy such as physical, occupational, or speech therapy for your child?
$\underline{22}$ Q23. (ATSS) In the last 6 months, how often was it easy to get this therapy for your child?
23 Q24. Did anyone from your childs health plan, doctors office, or clinic help you get this therapy for your child?
$24 \frac{\text { Q25. In the last } 6 \text { months, did you get or try to get treatment or counseling for your child for an emotional, developmental, or behavioral }}{\text { problem? }}$ 24 problem?
25 Q26. (ATSS) In the last 6 months, how often was it easy to get this treatment or counseling for your child?
26 Q27. Did anyone fromyour childs health plan, doctors office, or clinic help you get this treatment or counseling for your child?
7 Q28. In the last 6 months, did your child get care frommore than one kind of health care provider or use more than one kind of health care service?
Q29. (OC-OOC) In the last 6 months, did anyone from your childs health plan, doctors office, or clinic help coordinate your childs care among these different providers or services?
29 Q30. A personal doctor is the one your child would see if he or she needs a checkup, has a health problem or gets sick or hurt. Does your child have a personal doctor?

30 Q31. In the last 6 months, how many times did your child visit his or her personal doctor for care?

31 easy to understand?

32 Q33. (HMDC) In the last 6 months, how often did your childs personal doctor listen carefully to you?

33 Q34. (HMDC) In the last 6 months, how often did your childs personal doctor show respect for what you had to say?

34 Q35. Is your child able to talk with doctors about his or her health care?

35 Q36. In the last 6 months, how often did your childs personal doctor explain things in a way that was easy for your child to understand?

36 Q37. (HMDC) in the last 6 months, how often did your childs personal doctor spend enough time with your child?

37 Q38. In the last 6 months, did your childs personal doctor talk with you about how your child is feeling, growing, or behaving?

38 Q39. In the last 6 months, did your child get care from a doctor or other health provider besides his or her personal doctor?

39 Q40. (CC) In the last 6 months, how often did your childs personal doctor seeminformed and up-to-date about the care your child got
39 fromthese doctors or other health providers?

130 Q49. In the last 6 months, did you get information or help from customer service at your childs health plan?
131 Q50. (CS) In the last 6 months, how often did customer service at your childs health plan give you the information or help you needed?
132 Q51. (CS) In the last 6 months, how often did customer service staff at your childs heath plan treat you with courtesy and respect? 133 Q52. In the last 6 months, did your childs health plan give you any forms to fill out?
134 Q53. (FOF) In the last 6 months, how often were the forms fromyour childs health plan easy to fill out?
135 Q54. Using any number from 0 to 10 , where 0 is the worst health plan possible and 10 is the best health plan possible, what number would you use to rate your childs health plan?
136 Q55. In the last 6 months, did you get or refill any prescription medicines for your child?
137 Q56. In the last 6 months, how often was it easy to get prescription medicines for your child through his or her health plan?
138 Q57. Did anyone from your childs health plan, doctors office, or clinic help you get your childs prescription medicines?
139 Q58. In general, how would you rate your childs overall health?
140 Q59. In general, how would you rate your childs overall mental or emotional health?
141 Q60. Does your child currently need or use medicine prescribed by a doctor (other than vitamins)?
142 Q61. Is this because of any medical, behavioral, or other health condition?
143 Q62. Is this a condition that has lasted or is expected to last for at least 12 months?
144 Q63. Does your child need or use more medical care, more mental health services, or more educational services than is usual for most 144 children of the same age?
145 Q64. Is this because of any medical, behavioral, or other health condition?
146 Q65. Is this a condition that has lasted or is expected to last for at least 12 months?
147 Q66. Is your child limited or prevented in any way in his or her ability to do the things most children of the same age can do?
148 Q67. Is this because of any medical, behavioral, or other health condition?
149 Q68. Is this a condition that has lasted or is expected to last for at least 12 months?
150 Q69. Does your child need or get special therapy such as physical, occupational, or speech therapy?

## 151 Q70. Is this because of any medical, behavioral, or other health condition?

152 Q71. Is this a condition that has lasted or is expected to last for at least 12 months?
153 Q72. Does your child have any kind of emotional, developmental, or behavioral problemfor which he or she needs or gets treatment or 153 counseling?
154 Q73. Has this problemlasted or is it expected to last for at least 12 months?

## 155 Q74. What is your child's age?

156 Q75. Is your child male or female?
157 Q76. Is your child of Hispanic or Latino origin or descent?
158 Q77. What is your race? Pease mark one or more.
159 Q78. What is your age?
160 Q79. Are you male or female?
161 Q80. What is the highest grade or level of school that you have completed?
162 Q81. How are you related to the child?
163 Q82. Did someone help you complete this survey?
164 Q83. How did that person help you? Check all that apply.
