General Population Results by COUNTY
Page 1 Q1. Our records show that your child is now in Molina Healthcare of New Mexico. Is that right? (GENERAL POPULATION)

Page 2 Q3. In the last 6 months, did your child have an illness, injury, or condition that needed care right away in a clinic, emergency room, or doctor's office? (GENERAL POPULATION)
Page 3 Q4. (GCQ) In the last 6 months, when your child needed care right away, how often did your child get care as soon as he or she needed? (GENERAL POPULATION)

Page 4 Q5. In the last 6 months, did you make any appointments for a check-up or routine care for your child at a doctor's office or clinic? (GENERAL POPULATION)
Page 5 Q6. (GCQ) In the last 6 months, when you made an appointment for a check-up or routine care for your child at a doctor's office or clinic, how often did you get an appointment as soon as your child needed (GENERAL POPULATION)

Page \(7 \quad\) Q7. In the last 6 months, not counting the times your child went to an emergency room, how many times did he or she go to a doctor's office or clinic to get health care?
(GENERAL POPULATION)
Page 9 Q8. (HPE) In the last 6 months, did you and your child's doctor or other health provider talk about specific things you could do to prevent illness in your child? (GENERAL POPULATION)

Page 10 Q9. (FCC-GNI) In the last 6 months, how often did you have your questions answered by your child's doctors or other health providers? (GENERAL POPULATION)
Page 11 Q10. In the last 6 months, did you and your child's doctor or other health provider talk about starting or stopping a prescription medicine for your child? (GENERAL POPULATION)

Page 12 Q11. (SDM) Did you and a doctor or other health provider talk about the reasons you might want your child to take a medicine? (GENERAL POPULATION)
Page 13 Q12. (SDM) Did you and a doctor or other health provider talk about the reasons you might not want your child to take a medicine?

Independent Z -Test for Percentages (unpooled proportions)
Uppercase letters indicate significance at the 95\% level
Lowercase letters indicate significance at the \(90 \%\) level.
}

Q22. In the last 6 months, did you get or try to get
special therapy such as physical, occupational, or speech therapy for your child?

Independent Z-Test for Priking (unpooled proportions) Uppercase letters indicate significance at the \(95 \%\) level Lowercase letters indicate significance at the \(90 \%\) level

2017 Final Report for Molina Healthcare of New Mexico

\section*{11. Glossary of Terms}

Accreditation is an official authorization or designation to an organization determined by a set of industry-derived standards.

Attributes are the questions that relate to a specific service area or composite as defined by NCQA.

Augments are stratified samples used to target specific responses in a particular segment, such as region, language, or member status. These responses are for internal use only, and are not to be included in the \(\mathrm{HEDIS}^{\circledR}\) sample or reported to public entities.

CCC Survey-Based Screening Tool is used to identify children with chronic conditions. It contains five questions representing five different health consequences; four are three-part questions and one is a two-part question. A child member is identified as having a chronic condition if all parts of the question for at least one of the specific health consequences are answered "Yes." The questions included are Q60-Q62; Q63-Q65; Q66-Q68; Q69-Q71; Q72 and Q73.

Composites are the means of the Summary Rates of attributes within a given service area as specified by NCQA. Each composite category represents an overall aspect of plan quality and is comprised of similar questions.

Confidence level is the degree of confidence, expressed as a percentage, that a reported number's true value is between the lower and upper specified range.

Correlation Coefficient is a statistical measure of how closely two variables or measures are related to each other. Coefficients are usually reported as \(r\) values.

Disposition (Disposition Category) is the final status assignment given to a member record within the sample. The category signifies both the survey administration protocol used to complete the survey ( \(\mathrm{M}=\) Mail, \(\mathrm{T}=\) Phone, and I=Internet, if applicable) and the status of the record (for example, M0=mail complete, 03=language barrier). All record code assignments of " 0 " are considered valid responses according to NCQA.

Global Proportions are a breakout of response option results according to the Three-Point Score definition, shown as a percentage, not a mean score. Refer to the Three-Point Score definition.

Key Drivers are composites that have been found to impact overall health plan ratings or health care ratings among the plan members as determined by a regression analysis.

NCQA 1 - 100 Benchmark is a percentile benchmark (with values ranging from the first through the one hundredth percentile) calculated by NCQA and derived from Medicaid child data collected by NCQA in 2016. SPH Analytics utilizes this benchmark to calculate planspecific approximate percentile rankings in relation to the Quality Compass \({ }^{\circledR}\) All Plans benchmark. In keeping, rankings are reflective of how your plan's Summary Rates fall relative to the NCQA 1-100 Benchmark.

2017 Final Report for Molina Healthcare of New Mexico Consumer Assessment of Healthcare Providers and Systems (CAHPS \({ }^{\circledR}\) ) Survey

NCQA HEDIS \({ }^{\circledR}\) Compliance Audit is a two-part program comprised of an informationsystems capabilities assessment (IS standards) and an evaluation of the health plan's ability to comply with HEDIS \({ }^{\circledR}\) specifications (HD standards). NCQA-Certified auditors use standard audit methodologies to enable purchasers to make reliable comparisons among health plans.

Over-sampling is sampling more than the minimum required sample size. The required sample size is 3,490 ( 1,650 General Population \(+1,840\) supplemental sample) in accordance with NCQA protocol. The overall NCQA target number of complete responses is 411. Therefore, plans may choose to over-sample their population to achieve this target number if necessary.

Quality Compass \({ }^{\circledR} 2016\) (Medicaid child - All Plans, CCC Population) data benchmark is a collection of CAHPS \({ }^{\circledR} 5.0 \mathrm{H}\) mean summary ratings ( 53 samples) for those Medicaid child plans (CCC samples with at least 100 valid responses per question item) allowing NCQA to use their data to be compiled into an aggregate, or national summary, without releasing their plan-level scores.

Quality Compass \({ }^{\circledR} 2016\) (Medicaid child - All Plans, General Population) data benchmark is a collection of CAHPS \({ }^{\circledR} 5.0 \mathrm{H}\) mean summary ratings (179 samples) for those Medicaid child plans (Non-CCC and CCC samples with at least 100 valid responses per question item) allowing NCQA to use their data to be compiled into an aggregate, or national summary, without releasing their plan-level scores.

Rating questions use a scale of 0 to 10 for assessing overall experience (Personal Doctor, Specialist, Health Care, and Health Plan) with zero being the worst and ten being the best.

Significance test is a test to determine if an observed difference is too large to have occurred by chance alone.

SPH Analytics Book of Business, CCC Population (calculated on a plan-level) consists of all Medicaid Child (Non-CCC and CCC) samples that conducted surveys with SPH Analytics, and submitted data to NCQA. In 2017, there were 13 samples included in the Book of Business. This benchmark is shown throughout the report.

SPH Analytics Book of Business, General Population (calculated on a plan-level) consists of all Medicaid Child (Non-CCC and CCC) samples that conducted surveys with SPH Analytics, and submitted data to NCQA. In 2017, there were 69 samples included in the Book of Business. This benchmark is shown throughout the report and is used in the Opportunity Analysis.

Summary Rates are single statistics generated for a survey question. In general, Summary Rates represent the percentage of respondents who chose the most favorable response options ("Always" and "Usually;" "Yes;" or " 8 " to " 10 "). Not all questions are assigned a Summary Rate by NCQA.

Supplemental Sample is selected by the survey vendor after the General Population sample is drawn. It contains members with a prescreen status code indicating the child is more likely to have chronic conditions based on claims records. For the Medicaid Child Member Satisfaction Survey (with CCC Measurement Set) it is typically 1,840 members who were not
already selected in the General Population sample. In MCOs with fewer than the required sample size, the sample includes all members with the prescreen status code who were not already selected for the General Population. This sample is sometimes referred to as Sample B.

Three-Point Score is the result of the process of assigning a value of 1,2 , or 3 to each question response category and then computing a numerical average based upon the valid responses for each question. The Three-Point values are assigned to question answer categories as follows:
\begin{tabular}{c|c|c|ccc|c}
\hline \begin{tabular}{c} 
Response \\
Choice 1
\end{tabular} & \begin{tabular}{c} 
Score \\
Value
\end{tabular} & Response Choice 2 & \begin{tabular}{c} 
Score \\
Value
\end{tabular} & \begin{tabular}{c} 
Response \\
Choice 3
\end{tabular} & \begin{tabular}{c} 
Score \\
Value
\end{tabular} \\
\hline Never & 1 & No & 1 & \(0-6\) & 1 \\
\hline Sometimes & 1 & Yes & 3 & & \(7 \& 8\) & 2 \\
\hline Usually & 2 & & & \(9 \& 10\) & 3 \\
\hline
\end{tabular}

Trending is the practice of looking at several years of data in a comparative format to identify trends or common links.

Please refer to the Technical Notes for additional information about topics not displayed in this section.

2017 Final Report for Molina Healthcare of New Mexico Consumer Assessment of Healthcare Providers and Systems (CAHPS \({ }^{\circledR}\) ) Survey

\section*{12. Appendix A - Question Summaries}

The proportion of respondents that fall into each response category for all questions is shown beginning on Page A.1. Benchmark data and trend information are also presented where available.

Not all questions are included in composite calculations. Therefore, the codes found in the following table are used to indicate which attributes are included in the corresponding composite calculations. These codes can be found under their respective question numbers in the charts beginning on Page A.1.
\begin{tabular}{c|c}
\hline Code & Composites/Measures \\
GNC & Getting Needed Care \\
\hline GCQ & Getting Care Quickly \\
\hline HWDC & How Well Doctors Communicate \\
\hline CS & Customer Service \\
\hline SDM & Shared Decision Making \\
\hline HPE & Health Promotion and Education \\
\hline CC & Coordination of Care \\
\hline FOF & Ease of Filling Out Forms \\
\hline
\end{tabular}
\begin{tabular}{c|c} 
Code & CCC Composites \\
\hline ATPM & Access to Prescription Medicines \\
\hline ATSS & Access to Specialized Services \\
\hline FCC-PD & Family-Centered Care: Personal Doctor Who \\
Knows Child
\end{tabular}

* The 2017 SPH Analytics (SPHA) Book of Business, General Population consists of 69 Medicaid child (Non-CCC and CCC) samples that conducted surveys with SPH Analytics in 2017 and submitted data to NCQA. The 2017 SPH Analytics (SPHA) Book of Business, CCC Population, consists of 13 Medicaid child (CCC) samples that conducted surveys with SPH Analytics in 2017 and submitted data to NCQA. The 2016 Quality Compass® All Plans benchmark, General Population, is the mean summary rate from the Medicaid child (Non-CCC and CCC) samples that submitted to NCQA in 2016 (approximately 179 plan-specific samples). The 2016 Quality Compass® All Plans benchmark, CCC Population, is the mean summary rate from the Medicaid child (CCC) samples that submitted to NCQA in 2016 (approximately 53 plan-specific samples).
** Significance Testing - "Sig. decrease"/"Below" denotes the results that were found when hypothesis tests were conducted to determine if the percentage is lower. "Sig. increase"/"Above" denotes the results that were found when hypothesis tests were conducted to determine if the percentage is higher. "Unable to Test" denotes that there was insufficient sample size to conduct the statistical test. All significance testing is performed at the \(95 \%\) significance level.
Note: Select Summary Rates are defined by NCQA in its HEDIS 2017 CAHPS \(^{\circledR} 5.0 \mathrm{H}\) guidelines and generally represent the most favorable response percentages. Other Summary Rates were selected by SPH Analytics to facilitate comparisons.

 Analytics (SPHA) Book of Business, CCC Population, consists of 13 Medicaid child (CCC) samples that conducted surveys with SPH Analytics in 2017 and submitted data to NCQA. The 2016 Quality Compass \(®\) All Plans
benchmark, General Population, is the mean summary rate from the Medicaid child (Non-CCC and CCC) samples that submitted to NCQA in 2016 (approximately 179 plan-specific samples). The 2016 Quality Compass® All Plans benchmark, General Population, is the mean summary rate from the Medicaid child (Non-CCC and CCC) samples that submitted to NCQA in 2016 (approximately 179 plan
benchmark, CCC Population, is the mean summary rate from the Medicaid child (CCC) samples that submitted to NCQA in 2016 (approximately 53 plan-specific samples).
** Significance Testing - "Sig. decrease"/"Below" denotes the results that were found when hypothesis tests were conducted to determine if the percentage is lower. "Sig. increase"/"Above" denotes the results that were found when hypothesis tests were conducted to determine if the percentage is higher. "Unable to Test" denotes that there was insufficient sample size to conduct the statistical test. All significance testing is performed at the \(95 \%\) significance level.
Note: Select Summary Rates are defined by NCQA in its HEDIS 2017 CAHPS \({ }^{\circledR} 5.0 \mathrm{H}\) guidelines and generally represent the most favorable response percentages. Other Summary Rates were selected by SPH Analytics to facilitate comparisons.

\section*{13. Appendix B-Custom Questions}

Your plan's custom questions are shown beginning on Page B.1. All custom questions are shown in this section, regardless of their placement on the survey tool. Your plan's Summary Rate for the current year is shown alongside the Summary Rate for the identical question from the previous year (where applicable).

The Summary Rates shown represent the percentage of respondents who answered in a positive way. Not all questions are designed for the assignment of Summary Rates, such as "Mark all that apply" questions. In this case, an "NA" is shown in the Summary Rate column.

Range is the difference beewen Summay Raes shown. The largect the number, the greater the difference in Summay
- valid refers to total number of fespondents answeing the iem within the subgroup under the column heading.

\section*{Empowering Healthcare Transformation}

\title{
Quality Improvement Consulting
}

\section*{SPH Analytics Can Help You Identify Opportunities to Improve Performance}

SPH Analytics' Quality Consulting Services help evaluate initiatives for potential improvement based on the survey data provided and best industry practices through consultation with your organization's team members. An in-depth analysis can help organizations identify strengths and weaknesses, as well as opportunities to improve performance.

\section*{Harnessing the Power of Information}

SPHA Consulting Services help organizations develop initiatives and solutions for improved performance, patient/ member satisfaction, and improvement in scores and ratings.

\section*{Action Plans for Improvement}

SPHA consultants work with you to develop action plans for improvement. Our experienced consultants have extensive backgrounds in quality improvement, healthcare research, and program evaluation and development. Consultants have worked with and for leading healthcare organizations to implement process improvements and strategic initiatives.

\section*{Stars/Scores Improvement}

We understand Star Ratings and scores improvement is important to your organization. As a leader in healthcare transformation, SPHA helps you evaluate your organization's performance to develop a realistic plan for improvement. SPHA looks beyond typical measures to help you gain a more meaningful understanding of patient and member sentiment. SPHA consultants help guide your performance improvement initiatives.

The answers are not always easy to find. However, there are steps you can take to bring you closer to your goals. SPHA's knowledgeable consultants help you develop plans that empower long-term success in the rapidly changing healthcare environment.

\section*{Benefits of SPHA's Consulting Services:}
- Gain insight and information based on overall findings
- Examine organizational strengths and weaknesses and their impact on performance
- Identify common themes, best practices, and calls to action
- Develop action plans for improvement
- Improve ratings and scores

[^1]:    ${ }_{4}^{3}$ Please note that the CAHPS ${ }^{\circledR}$ survey is eligible to be conducted from January through May 2017.
    ${ }^{4}$ Select Summary Rates are defined by NCQA in its HEDIS ${ }^{\circledR} 2017$ CAHPS ${ }^{\circledR} 5.0$ Huidelines and generally represent the most
    favorable response percentages. Other Summary Rates were selected by SPH Analytics to facilitate comparisons.
    ${ }^{5}$ Please refer to Section 2 - Methodology for the calculation used to determine the response rate.
    ${ }^{6}$ See the Glossary of Terms or Technical Notes at the end of this report for a definition of the CCC survey-based screening tool.

[^2]:    ${ }^{7}$ The source for data contained in this publication is Quality Compass ${ }^{\circledR}$ All Plans 2016 and is used with the permission of the National Committee for Quality Assurance (NCQA). Any analysis, interpretation, or conclusion based on these data is solely that of the authors, and NCQA specifically disclaims responsibility for any such analysis, interpretation, or conclusion. Quality Compass ${ }^{\circledR}$ is a registered trademark of NCQA.

[^3]:    * Indicates that the number of responses for this measure is less than 100 for the General Population; therefore, this measure will receive an NA by NCQA.

[^4]:    * Indicates that the number of responses for this measure is less than 100 for the General Population; therefore, this measure will receive an NA by NCQA.

[^5]:    ${ }^{8}$ Numbers shown are beta coefficients. See "Regression Analysis" in Technical Notes for more information.

[^6]:    ${ }^{9}$ Please note that health plan accreditation status provided by NCQA depends on the Evaluation Option that the plan has selected. For more information, please refer to NCQA's Standards and Guidelines for the Accreditation of Health Plans (2017) document. ${ }^{10}$ The Coordination of Care measure was added to 2016 accreditation scoring. Organizations accredited using the 2015 standards will not be scored using the organization's submitted rate for this measure.

[^7]:    ${ }^{11}$ Although plans may choose to augment their population, augments are not included in the Response Rate calculation or survey disposition groupings.

[^8]:    * Valid n refers to total number of respondents answering the response item within the subgroup under the column heading.
    ** Child's Health Status and Child's Mental/Emotional Health Status are defined by the member.

[^9]:    * Valid n refers to total number of respondents answering the response item within the subgroup under the column heading.
    ** Child's Health Status and Child's Mental/Emotional Health Status are defined by the member.

[^10]:    Race and Ethnicity are separate questions and respondents may choose more than one race option, therefore figures will not equal $100 \%$. "Other" includes respondents who answered "Other" to Q77.
    ** Health Status and Mental/Emotional Health Status are defined by the member.
    Note: Significance testing is not appropriate for these two groups since they are not mutually exclusive.

[^11]:    ${ }^{12}$ Your plan's approximate percentile rankings in relation to the Quality Compass ${ }^{\circledR}$ All Plans benchmark were calculated by SPH Analytics using information derived from the NCQA 1-100 Benchmark. Your percentile rank indicates where your plan's Summary Rate falls relative to the NCQA 1-100 Benchmark.

[^12]:    * Summary Rates are defined by NCQA in its HEDIS 2017 CAHPS ${ }^{\oplus} 5.0 \mathrm{H}$ guidelines and generally represent the most favorable response percentages
    
    is the mean summary rate from the Medicaid child (Non-CCC and CCC) samples that submitted to NCQA in 2016 (approximately 179 plan-specific samples).
    
     $95 \%$ significance level.

[^13]:    * Summary Rates are defined by NCQA in its HEDIS 2017 CAHPS® 5.0H guidelines and generally represent the most favorable response percentages.
    ** Your plan's approximate percentile rankings in relation to the Quality Compass® All Plans benchmark were calculated by SPH Analytics using information derived from the 2016 NCQA 1-100 Benchmark (comprised of 179 plan-specific samples). Rankings indicate where your plan's Summary Rates fall relative to the NCQA 1-100 Benchmark. Summary Rates that are below the 10th percentile are shown as '<10th.'
    *** The 2016 Quality Compass® All Plans benchmark is the mean summary rate from the Medicaid child (Non-CCC and CCC) samples that submitted to NCQA in 2016 (approximately 179 plan-specific samples).

[^14]:    - Summary Rate at or above the 90th percentile.

    Summary Rate at or above the 75th percentile, but below the 90th percentile.

    - Summary Rate at or above the 50th percentile, but below the 75 th percentile.
    $\square$ Summary Rate at or above the 25th percentile, but below the 50th percentile.
    Summary Rate below the 25th percentile.

[^15]:    Three-Point Score is the sum of three scores: percent in orange has a score of 1, percent in light blue has a score of 2, and percent in blue has a score of 3 . The composite Three-Point Score is the average of its attributes' Three-Point Score
    ${ }^{* *} 90$ th percentile represents the minimum score needed to obtain full accreditation points for this measure.
    Note 1: If a plan receives an NA (indicating the denominator was less than 100) the points for that measure are redistributed among the remaining required measures. An organization that has more than four CAHPS $\mathbb{B}$ NAs, or which exceed ten NA or NB results between HEDIS and CAHPS® for each product line, are scored based on the standards score only and the accreditation status is capped at Commendable
    Note 2: Percentages may not add to $100 \%$ due to rounding.

[^16]:    ${ }^{14}$ Each year NCQA publishes the Accreditation Benchmarks and Thresholds. Benchmarks and thresholds displayed in this report are found in the Accreditation Benchmarks and Thresholds (2017), which includes all Medicaid child plan data to calculate a single set of benchmarks and thresholds.
    ${ }^{15}$ The CAHPS ${ }^{\circledR}$ Coordination of Care measure was introduced into 2016 accreditation scoring. Organizations accredited on the 2015 standards will not be scored using the organization's submitted rate for this measure.

[^17]:    * The average number of valid responses for this measure is less than 100, therefore this measure will receive an NA by NCQA.

    Note: NCQA calculates a 3-point score for composites and rating questions. These scores are used by NCQA to compare MCOs to each other or to compare MCOs to aggregate data. These scores are also the basis of NCQA Accreditation scoring for commercial adult and Medicaid adult or child plans.

[^18]:    ${ }^{16}$ Refer to "Summary Rate" in the Technical Notes for the Summary Rate definition for each composite and attribute.

[^19]:    * Range is the difference between Summary Rates shown. The larger the number, the greater the difference in Summary Rates between segment groups for any given question/composite.
    ** Valid $n$ refers to total number of respondents answering the item within the subgroup under the column heading.
    Note: Select Summary Rates are defined by NCQA in its HEDIS 2017 CAHPS ${ }^{\circledR} 5.0 \mathrm{H}$ guidelines and generally represent the most favorable response percentages.

[^20]:    * Range is the difference between Summary Rates shown. Due to the small number of respondents indicating their child's health is "Fair" or "Poor," this segment is not included in range calculations.
    ** Valid n refers to total number of respondents answering the item within the subgroup under the column heading.
    Note: Select Summary Rates are defined by NCQA in its HEDIS 2017 CAHPS ${ }^{\circledR} 5.0$ H guidelines and generally represent the most favorable response percentages.

[^21]:    * Range is the difference between Summary Rates shown. Due to small number of respondents indicating that they "Never" or "Sometimes" received help from customer service, range calculations are not included.
    ** Valid n refers to total number of respondents answering the item within the subgroup under the column heading.
    Note: Select Summary Rates are defined by NCQA in its HEDIS 2017 CAHPS ${ }^{\circledR} 5.0 \mathrm{H}$ guidelines and generally represent the most favorable response percentages.

[^22]:    ${ }^{17}$ The CAHPS ${ }^{\circledR}$ Coordination of Care measure was introduced into 2016 accreditation scoring. Organizations accredited on the 2015 standards will not be scored using the organization's submitted rate for this measure.

[^23]:    Three-Point Scores are displayed as "NA" if a minimum average of 100 responses was not met for the composite or attribute. Benchmarks apply to the composite score only.

[^24]:    Three-Point Scores are displayed as "NA" if a minimum average of 100 responses was not met for the composite or attribute. Benchmarks apply to the composite score only.

[^25]:    Three-Point Scores are displayed as "NA" if a minimum average of 100 responses was not met for the composite or attribute. Benchmarks apply to the composite score only.

[^26]:    $\square 1$ Never
    $\square \square_{2}$ Sometimes
    $\square 3$ Usually
